National Institute of Statistics of Rwanda (NISR), The Integrated Business Enterprise Survey in Rwanda 2016 (IBES 2016) report, June 2018

Foreword

The *Integrated Business Enterprise Survey in Rwanda 2016* (IBES 2016) is a comprehensive enterprise survey undertaken to collect, compile, and analyze data on the level and structure of non-agricultural economic activity in the country for both informal and formal sectors with the formal sector defined as those businesses registered with the Rwanda Revenue Authority (RRA). Also included in formal sector are those companies which keep business accounts and or have 30 or more employees. Data collection has been carried out by the National Institute of Statistics of Rwanda (NISR) from 24th August 2017 to 23rd February 2018 with the year 2016 as the reference period.

IBES addresses lack of business data and provide inputs vital to the formulation of government economic policy and the monitoring of performance against development goals, as well as providing information for the expansion of the business sector and market research. IBES 2016 has drawn crucial lessons from the previous survey rounds: IBES 2015, IBES 2014 and the pilot IBES 2013. These lessons have already been used to introduce improvements to the IBES 2016.

The survey targets all enterprises classified under Sections B to S of the International Standard Industrial Classification of All Economic Activities, Revision 4 (ISIC-4). It gathers detailed enterprise level data through questions on employment, compensation to workers, fixed assets, and background information such as location, ownership status, and business environment to mention but a few.

Conducting an enterprise survey constitutes a challenging and enriching experience, significantly improving NISR capacity to accomplish its mandate. NISR staff was involved in every aspect— the design, formulation of the questionnaire, implementation, data processing, and report writing. At least three levels of training were conducted, and instruction manual was written. NISR has conducted field visits to monitor data collection. Data editing was carried out simultaneously with data collection to ensure timely correction of any mistakes in data collection.

This report presents main results of the survey. It introduces the survey in Chapter 1, sample design in Chapter 2, and survey results in Chapter 3. Key concepts and data collection methodology are presented in Chapter 4.

Yusuf MURANGWA
Director General, NISR

Acknowledgments

The IBES 2016 report is the outcome of many months of cooperative effort of NISR staff. The project recognizes the leadership of NISR management at various stages of the survey, spearheading the monitoring of the progress of data collection during the actual survey period. Their suggestions and comments on the report are also acknowledged with thanks.

The Department of Economic Statistics coordinated the field operations and supplied clarifications on technical matters related to the survey. Special thanks are due to the technical committee members, who at all stages of the fieldwork visited enumerators to assess whether data collection guidelines were being followed and suggested remedial measures.

Recognition goes to all primary fieldworkers, all team leaders, data editors, and regional supervisors posted in different parts of the country. Commendations go to them for doing codification and data entry after fieldwork.

Dr. Mohamed Abulata has provided technical expertise to the project from the start of this project. Youll Plan Ltd has been instrumental in the development of survey methodology, including the construction of the survey instruments, instruction manual, tabulation plan, data analysis, and preparation of the report.

Grateful acknowledgments are also given to all formal and informal enterprises which have cooperated and therefore to whom we guarantee maximum confidentiality.

IBES 2016 sectoral coverage and report highlights

Sectoral coverage

IBES 2016 covered all non-agricultural enterprises classified under Sections B to S of the International Standard Industrial Classification of All Economic Activities, Revision 4 (ISIC-4). The 16 activities include:

- Mining and quarrying;
- Manufacturing;
- Electricity, gas, steam and air conditioning supply;
- Water supply, sewage, waste management and remediation activity;
- Construction;
- Wholesale and retail trade ; repair of motor vehicles and motorcycles;
- Transportation and storage;
- Accommodation and food service activities;
- Information and communication;
- Financial and insurance activities;
- Real estate activities;
- Professional, scientific and technical activities;
- Administrative and support service activities;
- Human health and social work activities;
- Arts, entertainment and recreation; and
- Other service activities

In addition to background information about each enterprise, this survey has collected data on the number of people employed, their compensation, operating expenses and receipts, value of fixed assets, and outstanding loans. In this report, we have presented total assets, total equity and total liabilities for each sectors.

Key statistics from the survey

- The estimated total number of workers in formal sector enterprises in 2016 was 216,524 working in estimated 12,172 enterprises;
- 53.7% of employees in the formal business sector were based in Kigali;
- The largest business activity in the formal sector is manufacturing, employing around 15.0% of all employees ;
- 40.3% of formal businesses were owned by a single individual, while around 22.3% were limited companies and 9.2% are cooperatives;
- 1.9% of enterprises employed at least 100 staff, while 33.5% had 3 employees or fewer;
- 83.8% of enterprises were owned by Rwandan resident, while 3.0% were owned by non-residents;
- 43.9% of businesses had been operating for less than 5 years, while 12.7% had been established for at least 20 years;
- Amongst the largest businesses (100 or more employees) 22.6% had been operating for less than 5 years, while 31.7% had been operating for 20 or more years;
- 68.2 % of formal sector employees were men, and 31.8% women.
- In the informal sector, 95.0% of all businesses had at most 3 employees.
- 59.8% of informal workers were men, and 40.2% women.

Tables 0.1 and 0.2 below summarize IBES survey findings for the collected IBES data for 2014, 2015 and 2016.

Table 0.1: IBES key survey findings, 2014-2016

Indicator/Reference year	2014	2015	2016
1.Estimated total number of enterprises in formal sector	9,251	10,172	12,172
2.Estimated total number of workers in formal sector enterprises	175,244	183,667	216,524
3.Percentage of employees in the formal businesses working in Kigali	48.0	51.7	53.7
4.Percentage of formal businesses owned by single individuals	54.0	49.4	40.3
5.Percentage of limited companies in formal sector	18.0	22.2	22.3
6.Percentage of cooperatives in formal sector	10.0	9.9	9.2
7.Percentage of formal enterprises employing at least 100 persons (Large companies)	2.4	2.3	1.9
8.Percentage of formal enterprises employing 3 persons or fewer (Small businesses)	41.0	38.3	33.5
9.Percentage of formal enterprises owned by Rwandan residents	69.0	90.5	83.8
10.Percentage of formal enterprises owned by non-residents	2.4	3.1	3.0
11.Percentage of formal businesses of less than 5 years of operations	58.0	47.9	43.9
12.Percentage of formal businesses of at least 20 years of operations	9.0	8.4	12.7
13.Percentage of the largest businesses (with 100 or more employees) of less than 5 years of operations	31.0	34.2	22.6
14.Percentage of the largest businesses (with 100 or more employees) of 20 or more years of operations	18.0	18.9	31.7
15.Percentage of employed men in the formal sector	67.0	70.1	68.2
16.Percentage of employed women in the formal sector	33.0	29.9	31.8
17.Percentage of informal businesses with at most 3 employees (Small businesses)	91.7	94.9	95.0
18.Percentage of employed men in the informal sector	64.0	61.1	59.8
19.Percentage of employed women in the informal sector	36.0	38.9	40.2

Chapter 1: Introduction

1.1 Business Survey

The importance of a sound statistical database to development planning cannot be overemphasized. In particular, IBES has been planned to collect invaluable information about the state of business in the country, the number and nature of enterprises, their location, and who they are employing. It also collects information on business income and expenditure that are required for national accounting purposes, including the calculation of input-output ratios by industry. This information is useful for the private sector, the government and the development community alike.

In addition, the IBES project helps build and strengthen the capacity of the NISR - especially in the area of conducting enterprise surveys - including design, implementation, and data processing.

1.2 Coverage

IBES 2016 covered all non-agricultural enterprises classified under Sections B to S of the International Standard Industrial Classification of All Economic Activities, Revision 4 (ISIC-4). Meanwhile, the term “**enterprise**” referred to a commercial organization that operates on a for-profit basis and participates in selling goods or services to consumers. The term enterprise includes micro, small, medium and big businesses depending on the set criteria. The management of an enterprise typically develops a set of organizational objectives and a strategy for meeting those goals to help employees understand where the company is headed and how it intends to get there.

1.3 Sample Size

In any economy, the size or scale of operations of enterprises varies enormously, such as in the number of people employed, capital investment, output, and so on. Accordingly, the survey used a dual frame approach to data collection to improve the precision of estimates. A list frame of 2,708 formal enterprises and 2,474 informal enterprises was developed and targeted.

1.4 Schedules, Survey Period, Fieldwork

The survey employed simultaneously two schedules of enquiry, one to collect information for the formal sector and the other to collect information for the informal sector. These schedules were pre-tested in the field to ascertain the feasibility of data collection, and certain modifications were incorporated based on experience. Inquiries were almost completed in four months (from end August 2017 to December 2017) with few late responses in January and February 2018.

A team of 100 primary fieldworkers, 17 team leaders, 17 data editors, and 5 regional supervisors did the fieldwork. Before the commencement of fieldwork a two-tier training program was conducted, that is, the training of master trainers/ supervisors and a training of the primary fieldworkers. The training of trainers took 2 days while the training of fieldworkers took 6 days. Data collectors have been trained on concepts and definitions involved in filling up the questionnaire during data collection. Practical sessions have been organized in which fieldworkers exercised on how to fill in the questionnaire modules and solve problems encountered therein.

In addition, at the preliminary stage of the fieldwork, field visits were conducted at selected samples to assess whether the guidelines of data collection were being properly followed in canvassing the schedules of enquiry and to suggest remedial measures. NISR monitored the progress of data collection during the survey period and provided necessary clarifications on technical survey matters. A technical committee comprising of NISR staff reviewed and commented on the new fieldwork revelations, and discussed them to come up with a practical solutions that were later shared to all IBES staff. A team of 40 did the data entry and helped in data cleaning while another team of 19 were helping in questionnaire coding.

1.5 Interpreting the Results

The IBES 2016 is based on a sample of 2,708 formal and 2,474 informal sector enterprises, selected from an estimated 12,320 formal and 40,343 informal enterprises in 50 selected administrative sectors. Chapter II in this report describes the sampling procedure in more details. The survey has been designed so that it provides good quality estimates of shares or averages for the country as a whole.

All the estimates have been produced by ‘grossing-up’ the sample data. The sample was arranged so that all of the larger businesses in the country were completely enumerated, as in a census. But among the smaller formal businesses, only one in up to 16 was sampled. So the data from these sampled businesses are assumed to be representative of those not sampled.

However, errors arising from sampling are not the only kind of error that can occur in this type of exercise. These can include errors of reporting or recording the data and errors when capturing the data. Some businesses have been completely missed and for some no response was obtained. While every effort has been made to minimize these errors, some are likely to have escaped detection. When interpreting these tables, therefore, users should be aware that estimates of the overall levels may differ from the true (unknown) levels.

1.6 Comparison with the National Accounts

The published national accounts statistics also includes estimates of economic activity for the whole of Rwanda. These may differ from the survey estimates if one compiles indicators such as gross value added. A key reason for the difference is that, when producing the national accounts, many other sources of data are used, in addition to information from the business sector. For example data on consumption patterns from the Rwandan household budget survey (Integrated Households Living Conditions Survey EICV), data on international trade, and from other surveys, notably the Seasonal Agricultural Survey.

A further difference between the estimates from this survey and the national accounts arises because of coverage. The IBES covers the formal and informal activities in observable business premises. The national accounts estimates additionally include goods and services produced by household businesses without identifiable premises, often numerous but on a small scale. They also implicitly include estimates for the ‘hidden’ economy (transactions that are not recorded in business accounts) for example, goods that retailers may withdraw from their stocks for their own consumption.

For this reason, the national accounts estimates should be considered as providing the measure of the level of gross value added and output. However, the IBES can be used to enrich understanding of the underlying activity of the business sector by providing

more detailed information relating to investment, employment, credit, and the general business environment.

Chapter 2: Sample Design

2.1 Sampling frame

A sampling frame comprises a list of all units from which a sample survey is selected. An up-to-date, good quality sampling frame is an essential pre-requisite for organizing a sample survey. An Economic Census (EC) of all establishments can provide such a sampling frame, giving a listing of enterprises and a count of workers by broad industry groups at the primary level of geographical units such as villages.

The Establishment Census carried out in 2014 (EC2014) served as the sampling frame for both formal IBES 2016 and informal IBES 2017. For informal IBES 2017, EC2014 served as the sampling frame for the first stage sample and thereafter for the second stage sample a listing exercise was carried out in the sampled administrative sectors. In addition, for the formal IBES 2016 the EC2014 frame was supplemented using Rwanda Revenue Authority records to ensure that all the largest businesses were covered in the formal sector survey.

2.2 Formal sector sample

The formal sector was defined in both Establishment Census and IBES as those businesses both registered with the Rwanda Revenue Authority (RRA) and keeping business accounts. The formal IBES 2016 sample was produced from four separate components: a partial panel based on the IBES 2015 sample; a top-up based on large firms from the VAT and BIT registers; a fully enumerated stratum taken from the PAYE register (for large NPISH firms); and a sample of smaller (NPISH) firms from the PAYE register. Informal IBES sample has been drawn after a full enumeration in the sampled administrative sectors.

2.2.1 IBES panel

This includes all firms which responded to the IBES 2015 survey. In total there were 2,276 such enterprises. The purpose of this panel component of the IBES 2016 sample is to preserve a time series element in the overall sample. This is designed to reduce the variance of the estimates of changes in the characteristics of the population over time. In addition, the panel should improve the overall response rate to the survey because all of the enterprises in this component were willing and able to respond in 2015.

2.2.2 Top-up based on large firms from the VAT and BIT registers

There were 138 enterprises which are registered with RRA for VAT or income tax and which are not in the IBES panel sample. This component of the sample includes all firms registered with RRA with turnover greater than 1 billion RWF in 2016.

2.2.3 Large NPISH from PAYE register

The PAYE register includes 2,361 firms in the NPISH sector. All of those with employment greater than 30 and which were not the IBES panel were included in the IBES 2016 sample (31 in total).

2.2.4. Sampled NPISH from PAYE register

In addition to the inclusion of the largest NPISH firms from the PAYE register, a random sample of 263 small NPISH firms were selected from the PAYE register for those which were not in the IBES panel (2,330 In total). This part of the sample was stratified by size

of firm and by RCPA. A minimum stratum sample size of 10 was applied (or full enumeration for strata with fewer than 10 firms). See table below.

Table 2. 1: sampled NPISH from PAYE register

RCPA\Employees	0-3	4-30	Total
Education	14	27	41
Human health activities	13	15	28
Social work activities	9	14	23
Other arts, entertainment and recreation	7	5	12
Other service activities	64	95	159
Total	107	156	263

Source: NISR

2.3 Formal sector estimation

Most of the estimates included in this report have been obtained by multiplying the data for each sampled enterprise by its weight. The weight assigned to completely enumerated businesses was 1, as these businesses represent only themselves. The larger businesses from whom no response was obtained have been excluded from this report.

The initial weights assigned to businesses in the sampled strata were the inverse of the probabilities of selection. For example, if half of the businesses in a stratum were selected, the initial weight was 2. These initial sample weights ranged between 2 and 16. It was also necessary to take account of the businesses for which no response could be obtained within each stratum (around 4% of the updated sampled enterprises in the IBES panel list and 17% for the sampled NPISH) and to take out all non-eligible sampled businesses. The estimated actual, or valid, population of businesses in each stratum was taken as the original population less all non-eligible businesses. Similarly, the valid sample in each stratum was calculated as the original less all non-eligible businesses in the stratum.

As a result, the weights of the responding units were adjusted so as to maintain the original grossed up number of units in each stratum by dividing the valid population by the valid sample for all strata and these final weights were distributed to each sampled enterprise within the stratum. More precisely, if in each sampled stratum i , n_i is the number of valid businesses enumerated out of a valid population of N_i enterprises in the census, then the weight for each business is N_i/n_i . The assumption behind this method is that each business from which a valid response was received is representative of the eligible businesses in the wider population.

Overall, the total valid population, N , was 9,850 and the total valid sample, n , was 869 for IBES panel while for sampled NPISH N was 2,301 and n was 234. The following two tables illustrate how the final weights were derived.

Table 2. 2: Calculation of final weights for sampled strata (IBES panel)

Activity	Original sampled population	Sample in IBES	Achieved sample weights	Completed	Closed	Refused	Missing	Not eligible	Valid population	Valid sample	Adjusted design	Final weights
Total	9,910	929		837	59	23	9	1	9,850	869		
Mining and quarrying	40	6	6.7	5	1	0	0	0	39	5	7.8	7.8

Source: NISR

After the above calculated weights have been applied to the collected data the results have been compared to RRA declared figures. Furthermore, business survey data methodology has been introduced which resulted in the new weights presented in Table II.2 in order to take into account non responses of some enterprises which have declared their turnovers in 2016 by using turnovers for all non NPISH companies and the number of employees for all NPISH companies, see Table II.3.

We have assumed to have a VAT and BIT frame, and identified all IBES 2016 respondents which are in the new frame in order to take into account big non responses. Then, all NPISHs which have complied and responded in IBES 2016 have been excluded and left with their already calculated weights in Table II.3 above.

Two main issues have aroused. The first issue was that of 138 companies with turnover of more than 1 billion Frw have not provided their turnover in IBES 2016 but which had declared it in the new RRA frame. The second issue was for companies with turnover in IBES 2016 but without it in the new RRA frame. The first ones were treated as non-responses and the second category was considered as self-representing with the weight of 1.

Finally, other final cleanings have been done. These consisted of wrong classification, used currency, and nonmatching reported IBES 2016 and RRA figures.

Table 2.4: Weights of business data

RCPA	RRA Turnover in Frw million	IBES Turnover in Frw million	New weight
Mining and quarrying	150,680	131,372	1.1
Manufacturing	644,714	530,017	1.2

2.4 Informal sector sample

The selection of enterprises in informal sector was based on a two stage sample. The first stage was the selection of administrative sectors, which form the enumeration areas (EAs); where a sample of 50 administrative sectors were selected using the 'probability proportional to size' (PPS) method based on the data from the 2014 Establishment Census.

The measure of size (MoS) used was the number of enterprises in each administrative sector, i.e.

$$\text{MoS}_{hi} = \sum_{j=1}^t P(h, i, j),$$

Where, S_{hi} is the size of the administrative sector i , in geographic stratum h ; and $P(h,i,j)$ is the number of enterprises in the economic activity j , within the sector i , in geographic stratum h .

The fieldwork was carried out in the first stage (in 50 selected administrative sectors) where information was collected about the economic activity, number of workers, registration status, maintaining of regular business accounts and time of starting operations. Based on this, a new listing of all the enterprises in the sample EAs was established. At the second stage, the listed enterprises in each sample EA were then stratified by major economic activity (ISIC Rev.4 2 digit), and a sample of enterprises was then selected within each stratum. For some strata all of the listed enterprises were included in the survey with certainty at the second sampling stage in case there were 3 or less enterprises for one ISIC 2 digit code within the sampled administrative sector. The procedure led to a total sample of 2,474 informal enterprises being selected.

2.5 Informal sector estimation

The selection probabilities for enterprises in an area sample depend on the sample design. As noted, the IBES informal sector area frame sample was based on a two-stage selection. As such, the probability of selection can be expressed as follows:

$$p_{hij} = \frac{m_h \times MoS_{hi}}{\sum_{i \in h} S_{hi}} \times \frac{n_{hij}}{N_{hij}},$$

where:

p_{hij} = probability of selection for the sample enterprises in the j -th economic activity group within the i -th sample segment (that is administrative sector) in geographic stratum h

m_h = number of sample segments selected in geographic stratum h

MoS_{hi} = measure of size (based on the indicator established for the PPS selection) for the i -th sample area in geographic stratum h

n_{hij} = number of sample enterprises selected in the j -th economic activity group within the i -th sample area in geographic stratum h

N_{hij} = total number of enterprises in the j -th economic activity group within the i -th sample area in geographic stratum h

In sample strata where all the enterprises for an economic activity are included in the sample at the second sampling stage, the second term of this probability was 1. The weight (or 'raising factor') applied to the data from the informal enterprises is calculated as the inverse of this probability of selection, as follows:

$$W_{hij} = \frac{\sum_{i \in h} S_{hi}}{m_h \times MoS_{hi}} \times \frac{N_{hij}}{n_{hij}}$$

Finally, a non-response adjustment factor similar to that used for the formal IBES 2016 was applied to this weight, within the economic activity group in the EA. This factor is equal to the valid sample divided by the completed interviews for each stratum.

Chapter 3: Business Activity In Rwanda - Survey Findings

This chapter presents findings from IBES 2016 for economic activities of enterprises both in the formal sector and in the informal sector. The formal sector was defined in both the Establishment Census and the IBES as those businesses both registered with the Rwanda Revenue Authority (RRA) and keeping accounts. Section III.1 gives an overview of the economic environment in which formal sector activity takes place, and section III.2 analyses the activities of these formal enterprises by industrial sector. The tables in this chapter are all based on the IBES 2016 results, unless otherwise stated.

3.1 Formal sector

3.1.1 Formal sector overview

As stated in the previous chapter, the total estimated 12,172 enterprises in all formal non-agricultural activities were reached in formal IBES 2016 (Table 1). The above estimate is based on a total sample of 2,660 enterprises drawn from the 2014 EC and RRA tax registers.

Table 3.1.1.1: Estimated total number of enterprises by province, formal sector

Province	Frequency	Percent
Kigali	5,693	46.8
South	1,851	15.2
West	1,830	15.0
North	947	7.8
East	1,850	15.2
Total	12,172	100

Source: NISR, IBES 2016 Survey

Kigali City ranks number one with more formal enterprises, with 46.8 percent, followed by Eastern and South Province, with 15.2 percent each. The Northern Province counts the least number of formal enterprises, 7.8 per cent.

Table 3.1.1.2: Estimated number of enterprises by economic activity, formal sector

Main Economic Activity	Frequency	Percent
Mining and quarrying	87	0.7
Manufacturing	619	5.1
Electricity, gas, steam and air conditioning supply	8	0.1
Water supply; sewerage, waste management and remediation activities	37	0.3
Construction	119	1.0
Wholesale and retail trade; repair of motor vehicles and motorcycles	3,963	32.6
Transportation and storage	136	1.1
Accommodation and food service activities	985	8.1

Arts, entertainment and recreation	50	0.4
Other service activities	1,884	15.5
Total	12,172	100

Source: NISR, IBES 2016 Survey

Table 3.1.1.2 above illustrates that in 2016 IBES Wholesale and retail trade; repair of motor vehicles and motorcycles, Other service activities and Human health and social work activities were the dominating economic sectors occupying 32.6, 15.5, and 10.7 per cent of the total formal business enterprises respectively.

When all formal business enterprises are classified by their legal status, the outcome shows that more of them, 40.3 per cent are individually owned followed by company limited by shares, 21.9 per cent, as shown in Table 3.1.1. 3.

Table 3.1.1.3: Distribution of enterprises by ownership, formal sector

Legal status of the enterprise	Frequency	Percent
Individual owner	4,904	40.3
Company limited by shares	2,665	21.9
Company limited by guarantee	17	0.1
Company limited by both shares and guarantee	27	0.2
Unlimited company	7	0.1
Cooperative	1,114	9.2
Government	1,057	8.7
NGO	1,722	14.1
Other	660	5.4
Total	12,172	100

Source: NISR, IBES 2016 Survey

Chart 3.1.1.1: Distribution of enterprises by size (number of employees), formal sector

Source: NISR, IBES 2016 Survey

Chart 3.1.1.1 above highlights the distribution of businesses by size. It illustrates that slightly more than a half is made of small enterprises employing between 4 and 30 persons. The big enterprises, those employing more than 100 persons, represent 1.9 per cent.

Table 3.1.1.3 shows the distribution of formal enterprises by economic activity and the enterprise size. This shows for example that most manufacturing enterprises are small, 52.5 per cent, while more of Electricity, gas, Steam and Air condition supply and Mining and quarrying companies are medium (employing between 30 and 101 employees), 50.0, and 20.8 per cent respectively.

Table 3.1.1.4: Percentage of formal enterprises by size band within each activity, formal sector

Main Economic Activity	Micro 1-3	Small 4-30	Medium 31-100	Big 100+	Total	Freq.
Mining and quarrying	17.5	52.5	20.8	9.2	100	87

Source: NISR, IBES 2016 Survey

Furthermore, as shown in Table 3.1.1.4, more than two third (66.6 per cent) of all micro enterprises are concentrated in trade; while more than a third (32.9 per cent) of all medium enterprises are in education sector. Manufacturing is mainly located under big enterprises (19.6 per cent of all big ones).

Table 3.1.1.5: Percentage of formal enterprises by activity within each size band, formal sector

Main Economic Activity	Micro 1-3	Small 4- 30	Medium 31-100	Big 100+	Total

The distribution of formal sector enterprises by size and age, see Table 3.1 .8, demonstrates that they are dominated by young ones (less than 5 years old), at 43.9 per cent, while those whose operations started 20 or more years ago was just 12.7 per cent. Table 3.1.1.8 also shows the distribution of formal sector enterprises by size and age. For example, 61.3 per cent of all formal micro enterprises (with 3 or fewer employees) have been established in the last 5 years, whereas 31.7 per cent of large enterprises (with 100 or more employees) have been established at least 20 years ago.

Table 3.1.1.8: Distribution of enterprises by age and size, formal sector

Size (employees)	Year of business commencement					Total	Freq.
	<= 5 Years	>5-10 Years	>10-15 Years	>15-20 Years	20+ Years

3.1.2 Formal sector results by main economic activity

This part is split into seven sections in which the results are analysed for formal sector enterprises in the IBES survey, and considers their activity by main industry. The details on acquisition and disposal of fixed assets are presented in the last section, specifically:

- 3.1.2.1: Industry sector
- 3.1.2.2: Services sector
- 3.1.2.3: Financial sector
- 3.1.2.4: Education sector
- 3.1.2.5: Health sector
- 3.1.2.6: NPISH sector
- 3.1.2.7: Acquisition and disposal of fixed assets

The activities of the sectors dominated by non-market activity (public administration and defence, Health and Social Work and Education) are not considered here.

Note that the results in this section are based on a weighted set of the data, using the methodology described in Chapter II. Importantly, each business in the IBES sample is regarded as representing a similar set of enterprises in the population of businesses as a whole. The largest enterprises are treated as representing only themselves, while the data for smaller enterprises have been multiplied by a factor (between 5 and 15, depending on their economic activity and number of employees). The results also include a small number of imputations for enterprises with more than 30 employees for which a survey response was not received. The counts of number of enterprises in the tables in this chapter therefore differ slightly from those in chapter II, which was limited to the actual number of responses received by NISR.

3.1.2.1 Industry sector

A. Introduction

In this report, the industry sector is made of the following five economic sectors: Mining and quarrying, Manufacturing, Electricity, gas, steam and air conditioning supply, Water supply; sewerage, waste management and remediation activities, and Construction.

Mining and quarrying sector includes the extraction of minerals occurring naturally as solids (coal and ores), liquids (petroleum) or gases (natural gas). Extraction can be achieved by different methods such as underground or surface mining, well operation, seabed mining etc. This also includes supplementary activities aimed at preparing the crude materials for marketing, for example, crushing, grinding, cleaning, drying, sorting, concentrating ores, liquefaction of natural gas and agglomeration of solid fuels. These operations are often carried out by the units that extracted the resource and/or others located nearby.

Manufacturing includes the physical or chemical transformation of materials, substances, or components into new products. The materials, substances, or components transformed are raw materials that are products of agriculture, forestry, fishing, mining or quarrying as well as products of other manufacturing activities. Substantial alteration, renovation or reconstruction of goods is generally considered to be manufacturing.

Electricity, gas, steam and air conditioning supply includes the activity of providing electric power, natural gas, steam, hot water and the like through a permanent infrastructure (network) of lines, mains and pipes. The dimension of the network is not decisive; also included are the distribution of electricity, gas, steam, hot water and the like in industrial parks or residential buildings. This, therefore, includes the operation of electric and gas utilities, which generate, control and distribute electric power or gas. Also included is the provision of steam and air-conditioning supply. This excludes the operation of water and sewerage utilities and also the (typically long-distance) transport of gas through pipelines.

Water supply; sewerage, waste management and remediation activities includes activities related to the management (including collection, treatment and disposal) of various forms of waste, such as solid or non-solid industrial or household waste, as well as contaminated sites. The output of the waste or sewage treatment process can either be disposed of or become an input into other production processes. Activities of water supply are also included, since they are often carried out in connection with, or by units also engaged in, the treatment of sewage.

Construction includes general construction and specialized construction activities for buildings and civil engineering works. It includes new work, repair, additions and alterations, the erection of prefabricated buildings or structures on the site and also construction of a temporary nature.

General construction is the construction of entire dwellings, office buildings, stores and other public and utility buildings, farm buildings etc., or the construction of civil engineering works such as motorways, streets, bridges, tunnels, railways, airfields, harbours and other water projects, irrigation systems, sewerage systems, industrial facilities, pipelines and electric lines, sports facilities etc.

This work can be carried out on own account or on a fee or contract basis. Portions of the work and sometimes even the whole practical work can be subcontracted out. A unit that carries the overall responsibility for a construction project is classified here. Also included is the repair of buildings and engineering works, the complete construction of buildings, the complete construction of civil engineering works, as well as specialized construction activities, if carried out only as a part of the construction process.

The renting of construction equipment with operator is classified with the specific construction activity carried out with this equipment. This also includes the development of building projects for buildings or civil engineering works by bringing together financial, technical and physical means to realize the construction projects for later sale. If these activities are carried out not for later sale of the construction projects, but for their operation (e.g. renting of space in these buildings, manufacturing activities in these plants), the unit would not be classified here, but according to its operational activity, i.e. real estate, manufacturing etc.

B. Analysis of industry sector

The results of IBES 2016 show that 71 percent of all enterprises in industry sector are in manufacturing. Construction sector occupies the second position with 14 percent. The

smallest sector in the industry sector with fewer enterprises is Electricity, gas, steam and air condition sub sector, see chart 3.1.2.1. 1

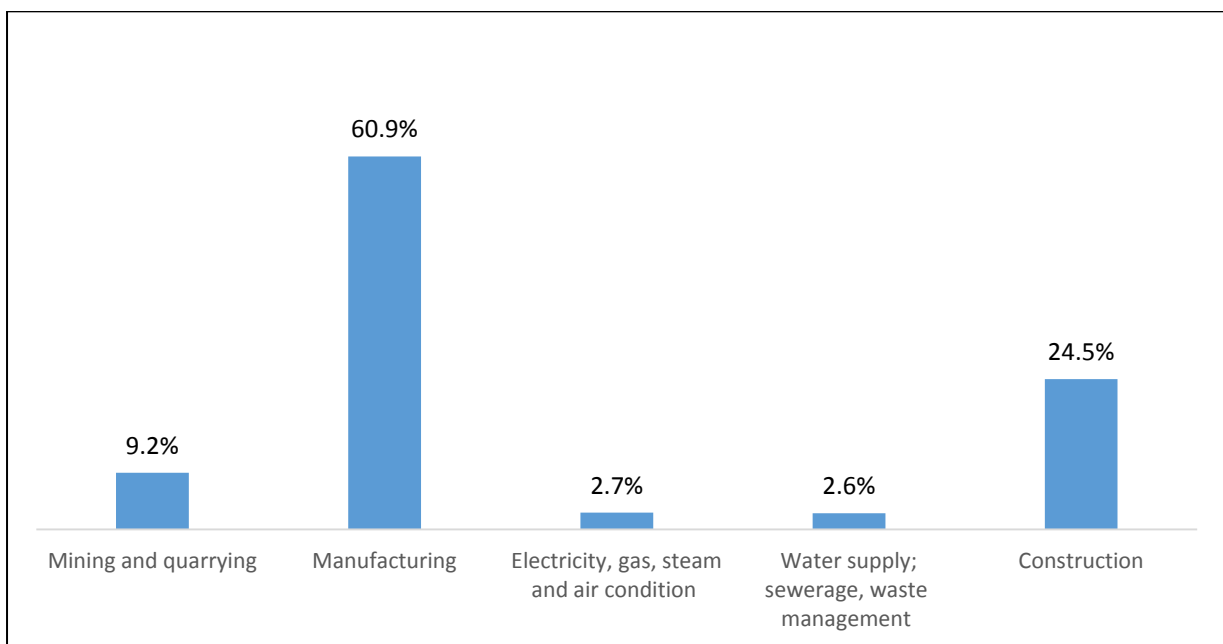

Chart 3.1.2.1.1: Distribution of industries shares

Source: NISR, IBES 2016 Survey

The survey estimates show that in total more than 71.0 percent are employed in the manufacturing sub-sector. The more the number of companies in a specific sector the more persons are employed, see chart 3.1.2.1. 2.

Chart 3.1.2.1.2: Distribution of employees by economic sectors

Source: NISR, IBES 2016 Survey

Table 3.1.2.1.1 below highlights the distribution of income components by industrial activities. The results show that manufactured goods have yielded more income, Frw 621.2 billion. On the second position is the construction work done which produced Frw 465.4 billion of revenue.

Table 3.1.2.1.1: Income statement for industry sector, Frw billion

Income components	Mining and quarrying	Manufacturing	Electricity, gas, steam and air condition	Water supply; sewerage, waste management	Construction	Total
Sales of goods in the same condition as purchased	1.3	8.5	0.0	1.8	0.6	12.1
Sales of manufactured, mined or quarried products	85.0	567.0	0.0	18.2	2.5	672.8

The total value of all purchased raw materials in 2016 was frw 405 billion made of mainly: Other raw materials, Metals and metal ores, other agricultural crops and Cereals. Table 3.1.2.1.7 gives more details.

Purchases of fuel for manufacturing, mining and quarrying were valued at Frw 19.8 billion. The following sectors were the most buyers, Manufacturing of non-metallic mineral products, Mining and quarrying and the Manufacturing of food. The most purchased product category was made of Coal. Table 3.1.2.1.8 gives more details.

Table 3.1.2.1.8: Purchases of fuel for manufacturing, mining and quarrying, Frw billion

Chart 3.1.2.1.4: Value of construction work done, Frw Billion

Source: NISR, IBES 2016 Survey

Chart 3.1.2.1.4 summarizes the distribution of the value of the construction work done. The total value of the constructed structures is Frw 350.1 billion. Roads and bridges and

other works were the most constructed structures with Frw 148.9 billion and Frw 75.3 billion respectively.

The construction expenses were Frw 248.2 billion. More money was spent on Payments to sub-contractors, Cement purchased, Quarry products (sand, gravel, stone etc), Iron and steel sheets, bars and rods, Fuel used in construction work and Hire of construction equipment. Chart 3.1.2.1.5 summarizes the distribution of the value of the construction expenses.

Chart 3.1.2.1.5: Values of construction expenses, Frw Billion

The distribution of industrial enterprises by employment size illustrates that more of them are in the category of enterprises which employ between 4 and 9 employees, 36.5 per cent, while the category with fewer enterprises are in the category that employ between 10 and 19 employees, see Chart 3.1.2.1.6.

Chart 3.1.2.1.6: Distribution of industries by employment size band

Source: NISR, IBES 2016 Survey

The observation of Chart 3.1.2.1.7 below demonstrates that out of 53.1 thousand employees in the industrial sector 47.3 thousands work in the very large enterprises with 100 and more employees. Therefore, very large enterprises with 100 and more employees each employ more persons even though they represent 12.8 per of all industrial enterprises, see Chart 3.2.1.6.

3.1.2.2: Services sector

A. Introduction

The services sector is made of trade, transportation, accommodation, information and communication, real estate activities, professional, scientific and technical services, administrative and support services, arts, other services except financial, education, and health.

i. Wholesale and retail trade; repair of motor vehicles and motorcycles

Wholesale and retail trade; repair of motor vehicles and motorcycles includes wholesale and retail sale (i.e. sale without transformation) of any type of goods and the rendering of services incidental to the sale of these goods. Wholesaling and retailing are the final steps in the distribution of goods. Goods bought and sold are also referred to as merchandise.

Also included are the repair of motor vehicles and motorcycles. Sale without transformation is considered to include the usual operations (or manipulations) associated with trade, for example sorting, grading and assembling of goods, mixing (blending) of goods (for example sand), bottling (with or without preceding bottle cleaning), packing, breaking bulk and repacking for distribution in smaller lots, storage (whether or not frozen or chilled), cleaning and drying of agricultural products, cutting out of wood fiberboards or metal sheets as secondary activities.

Wholesale and retail trade; repair of motor vehicles and motorcycles includes all activities related to the sale and repair of motor vehicles and motorcycles, include all other sale activities. The distinction between wholesale and retail sale is based on the predominant type of customer. Wholesale is the resale (sale without transformation) of new and used goods to retailers, to industrial, commercial, institutional or professional users, or to other wholesalers, or involves acting as an agent or broker in buying goods for, or selling goods to, such persons or companies. The principal types of businesses included are merchant wholesalers, i.e. wholesalers who take title to the goods they sell, such as wholesale merchants or jobbers, industrial distributors, exporters, importers, and cooperative buying associations, sales branches and sales offices (but not retail stores) that are maintained by manufacturing or mining units apart from their plants or mines for the purpose of marketing their products and that do not merely take orders to be filled by direct shipments from the plants or mines. Also included are merchandise brokers, commission merchants and agents and assemblers, buyers and cooperative associations engaged in the marketing of farm products. Wholesalers frequently physically assemble, sort and grade goods in large lots, break bulk, repack and redistribute in smaller lots, for example pharmaceuticals; store, refrigerate, deliver and install goods, engage in sales promotion for their customers and label design.

Retailing is the resale (sale without transformation) of new and used goods mainly to the general public for personal or household consumption or utilization, by shops, department stores, stalls, mail-order houses, door-to-door sales persons, hawkers and peddlers, consumer cooperatives, auction houses etc. Most retailers take title to the goods they sell, but some act as agents for a principal and sell either on consignment or on a commission basis.

ii. Transportation and storage

Transportation and storage includes the provision of passenger or freight transport, whether scheduled or not, by rail, pipeline, road, water or air and associated activities such as terminal and parking facilities, cargo handling, storage etc. Included in this category is the renting of transport equipment with driver or operator. Also included are postal and courier activities.

This category excludes maintenance and repair of motor vehicles which is classified in the Wholesale and retail trade; repair of motor vehicles and motorcycles, and other transportation equipment which is classified in manufacturing. Also excluded in this class is the construction, maintenance and repair of roads, railroads, harbours, airfields, which is included in Construction, as well as the renting of transport equipment without driver or operator which is found in Administrative and support service activities.

iii. Accommodation and food service activities

This section includes the provision of short-stay accommodation for visitors and other travellers and the provision of complete meals and drinks fit for immediate consumption. The amount and type of supplementary services provided within this section can vary widely.

This section excludes the provision of long-term accommodation as primary residences, which is classified in Real estate activities. Also excluded is the preparation of food or drinks that are either not fit for immediate consumption or that are sold through independent distribution channels, i.e. through wholesale or retail trade activities. The preparation of these foods is classified in Manufacturing.

iv. Information and communication

Information and communication includes the production and distribution of information and cultural products, the provision of the means to transmit or distribute these products, as well as data or communications, information technology activities and the processing of data and other information service activities.

The main components are publishing activities, including software publishing, motion picture and sound recording activities, radio and programming activities, telecommunications activities and information technology activities and other information service activities.

Publishing includes the acquisition of copyrights to content (information products) and making this content available to the general public by engaging in (or arranging for) the reproduction and distribution of this content in various forms. All the feasible forms of publishing (in print, electronic or audio form, on the internet, as multimedia products such as CD-ROM reference books etc.) are included.

v. Real estate activities

This section includes acting as lessors, agents and/or brokers in one or more of the following: selling or buying real estate, renting real estate, providing other real estate services such as appraising real estate or acting as real estate escrow agents. Activities in this section may be carried out on own or leased property and may be done on a fee

or contract basis. Also included is the building of structures, combined with maintaining ownership or leasing of such structures. This section includes real estate property managers.

vi. Professional, scientific and technical activities

This section includes specialized professional, scientific and technical activities. These activities require a high degree of training, and make specialized knowledge and skills available to users like legal, accounting, and photographic activities.

vii. Administrative and support service activities

This section includes a variety of activities that support general business operations. These activities differ from those in Professional, scientific and technical activities, since their primary purpose is not the transfer of specialized knowledge.

viii. Arts, entertainment and recreation

This section includes a wide range of activities to meet varied cultural, entertainment and recreational interests of the general public, including live performances, operation of museum sites, gambling, sports and recreation activities.

ix. Other service activities

This section (as a residual category) includes the activities of membership organizations, the repair of computers and personal and household goods and a variety of personal service activities not covered elsewhere.

B. Analysis of the services sector

In this report the services sector consists of the following sectors:

- Wholesale and retail trade; repair of motor vehicles and motorcycles
- Transportation and storage
- Accommodation and food service activities
- Information and communication
- Real estate activities
- Professional, scientific and technical activities

Chart 3.1.2.2.1 suggests that the Wholesale and retail trade; repair of motor vehicles and motorcycles sector holds 60.7 per cent of enterprises whereas the Arts, entertainment and recreation activities sector has 0.5 per cent enterprises.

Chart 3.1.2.2.1: Distribution of enterprises by services type

Source: NISR, IBES 2016 Survey

Chart 3.1.2.2.2 illustrates that Wholesale and retail trade; repair of motor vehicles and motorcycles sector employs around 22.2 thousand people while Art, entertainment recreation sector employs only 1.2 thousand. This goes in line with the previous Chart 3.1.2.2.1 that shows that large sectors are comprised of more enterprises.

Chart 3.1.2.2.2: Distribution of employees by enterprise size (000s)

Source: NISR IBES 2016 Survey

The income statement for service sector clearly indicates that the sale of goods in the same condition as purchased yielded more income (RWF 2,310.1 billion) than other components across all service sectors as shown by the below Table 3.2.2.1.

Table 3.2.2.1: Income statement for service sector, Frw billion

Income components	Wholesale and retail trade; repair of motor vehicles	Transportation and storage	Accommodation and food service activities	Information and communication	Real estate activities	Professional, scientific and technical	Administrative and support service activities	Arts, entertainment and recreation	Other service activities	Total

The following chart illustrates that big sized enterprises have employed 31,478 employees.

Chart 3.1.2.2.5: Distribution of employees by enterprise size

Source: NISR, IBES 2016 Survey

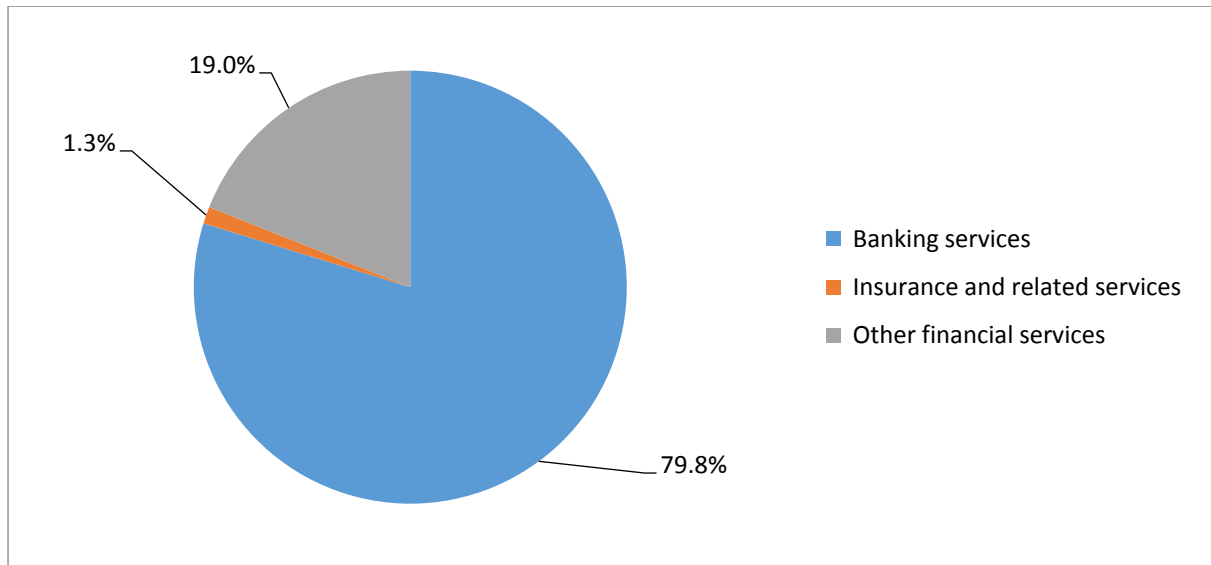

3.1.2.3: Financial and insurance activities

A. Introduction

Financial and insurance activities include financial service activities, insurance, reinsurance and pension funding activities and activities to support financial services. It also includes the activities of holding assets, such as activities of holding companies and the activities of trusts, funds and similar financial entities.

B. Analysis of financial and insurance activities

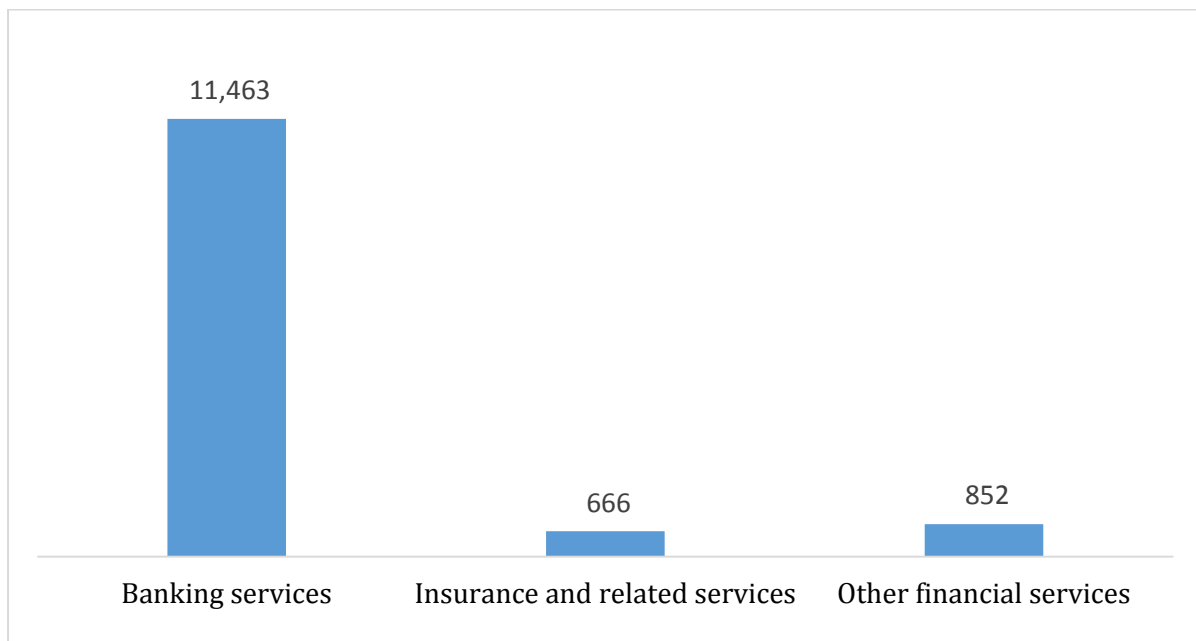

Chart 3.1.2.3.1: Distribution of enterprises by services type

Source: NISR, IBES 2016 Survey

The more enterprises in the sector, the more persons employed. This is shown in the chart below whereby 11.2 thousands persons are employed in the banking services while 0.6 thousand persons are employed in the insurance and related services.

Chart 3.1.2.3.2: Distribution of employees by enterprise size (000s)

Source: NISR, IBES 2016 Survey

The income statement of the Financial sector, hereafter in the table below reveals that interest received/premium earned constituted the top income generator for this sector for it realised Frw 322.5 billion in 2016 while the Gains on the sale of fixed assets made Rwf 0.2 billion.

Table 3.1.2.3.1: Income statement for financial sector, Frw billion

Income components	Monetary institutions	Insurance, reinsurance and pension funding, except compulsory social security	Other financial services	Total
Interest received/premiums earned	275.2	46.2	1.1	322.5
Fees & commisions/claim received	64.5	0.0	0.3	64.7

3.1.2.4: Education sector

A. Introduction

This section includes education at any level or for any profession, oral or written as well as by radio and television or other means of communication. It includes education by the different institutions in the regular school system at its different levels as well as adult education, literacy programmes etc. Also included are military schools and academies, prison schools etc. at their respective levels.

For each level of initial education, the classes include special education for physically or mentally handicapped pupils. This section also includes instruction primarily concerned with sport and recreational activities such as bridge or golf and education support activities.

In IBES this section includes only private and semi-public pre-primary, primary, secondary, technical vocational education and training (TVET) educational institutions as well as all private, semi-public and public higher learning institutions.

B. Analysis of education sector

Table 3.2.4.1: Income statement for Education sector

Income components	Billion Frw
Tuition fees paid : By students	71.5
Tuition fees paid : By REB	22.1
Tuition fees paid : By FARG	9.2
Tuition fees paid : By other supporters	5.6
Registration fees	2.8
Boarding	2.3
Government subsidies or grant	4.5
Development partners	15.1
Meals	4.3
Uniforms	0.8
Rent of land received/ receivable	0.2
Rent of buildings received/ receivable	0.4
Rent/lease of machinery and equipment	0.1
Research income	1.1
All other income	3.7
Total income	143.5

Source: NISR, IBES 2016 Survey

The above table describes the income statement of the education sector with almost a half being constituted by tuition fees paid by students, Frw 71.5 billion out of Frw 143.5 billion. Table 3.1.2.4.2 shows that the Wages & salaries paid (Social security & other

benefits included) has been the most expenditure component for education sector in 2016, Frw 77.7 billion.

Table 3.1.2.4.2: Expenditure statement for Education sector

Expenditure component	Billion Frw
Text books	1.1
Cost of uniforms	1.0
Cost of meals	8.1
Examination costs	2.1
Rent of land paid/payable	0.0
Rent of buildings paid/payable	2.1
Payments for rental or lease of machinery and equipment	0.0
Research expenses	2.5
All other goods and services purchased	37.7
Wages & salaries paid (Social security & other benefits included)	77.7
Interests paid / payable (not other bank charges)	2.6
Business licenses, rates and fees payable to government	0.8
Depreciation charges for the year on fixed assets	12.0
All other costs, losses, provisions, etc.	3.3
Total expenditure	151.0

Source: NISR, IBES 2016 Survey

The following table illustrates that, in education sector, big establishments make more income and expenditure when compared to others.

Table 3.1.2.4.3: Summary statement by enterprise size for education sector, Frw billion

Enterprise size	Total income	Total expenditure
<=3	0.0	0.0
>3, <=9	0.3	0.3
>9, <=19	1.3	1.5
>19, <=99	58.8	59.4
100+	83.2	89.9
Total	143.5	151.0

Source: NISR, IBES 2016 Survey

The chart below clearly indicates that 49.2 per cent of the education enterprises employ the number of persons in the range of >19, <=99 while only 1.9 per cent enterprises employs a 100 and more persons.

Chart 3.1.2.4.1 Distribution of enterprises by employment size band

Source: NISR, IBES 2016 Survey

The following chart stipulates that 18.6 thousands persons are employed in the >19, <=99 sized range education enterprises while it is rare to get a small sized (not more than 3 persons) education enterprise.

Chart 3.1.2.4.2 Distribution of employees by enterprise size

Source: NISR, IBES 2016 Survey

3.1.2.5: Human health and social work activities

A. Introduction

This section includes the provision of health and social work activities. Activities include a wide range of activities, starting from health care provided by trained medical professionals in hospitals and other facilities, over residential care activities that still involve a degree of health care activities to social work activities without any involvement of health care professionals.

B. Analysis of human health and social work activities

The following table describes the income statement of the health sector and it indicates that Income fees paid by Mutuelle de Santé contributed Frw 36.2 Billion in 2016

Table 3.1.2.5.1: Income statement for the health sector

Income component	Billion Frw
Income fees paid by patients or their supporters	25.2
Income fees paid by mutuelle de Santé	36.2
Income fees paid by RAMA	13.0
Income fees paid by other insurance companies	16.2
Grants from international organisations & charities	10.2
Grants from local organisations & charities	9.7
Rent of land received/receivable	0.0
Rent of buildings received/receivable	0.0
Rent/lease of machinery and equipment	0.0
All other types of service rendered	2.0
Grants or subsidies received from government	33.1
Interest received/receivable	0.1
Dividends or other profits realised	1.8
All other income, revaluations, write-backs etc	6.8
Total income	154.5

Source: NISR, IBES 2016 Survey

The top expenditure component for the health sector is the cost of staff and labour (wages, salaries, social security and other benefits) which accounted for Frw 66.8 billion in 2016.

Table 3.1.2.5.2: Expenditure statement for Health sector

Expenditure component	Billion Frw
Purchases of pharmaceuticals and medical supplies	32.0
Cleaning materials	3.0
Laboratory services paid/payable	6.8
Rent of land paid/payable	0.0
Rent of buildings paid/payable	0.6
Payments for rental or lease of machinery and equipment	0.8
All other goods and services purchased	37.2
Wages & salaries paid (Social security & other benefits included)	66.8
Interests paid / payable (not other bank charges)	1.5
Business licenses, rates and fees payable to government	0.3
Depreciation charges for the year on fixed assets	1.6
All other costs, losses, provisions, etc.	0.0
Total expenditures	150.6

Source: NISR, IBES 2016 Survey

The following table illustrates that, in health sector, big health facilities make more income and expenditure when compared to others.

Table 3.1.2.5.3: Summary statement by enterprise size for the health sector, Frw billion

Enterprise size	Total income	Total expenditure
<=3	4.7	4.4
>3, <=9	0.4	0.3
>9, <=19	2.3	2.4
>19, <=99	36.3	35.2
100+	107.0	114.6
Total	150.6	157.0

Source: NISR, IBES 2016 Survey

The following chart indicates that 48.8 per cent of enterprises employ the persons in the range of >19, <=99 while 4.1 per cent of enterprises employ more than 100 employees.

Chart 3.1.2.5.1 Distribution of enterprises by employment size band

Source: NISR, IBES 2016 Survey

The following chart is about the number of employees by enterprise size and it is shown hereafter that the big sized enterprises (100+ persons) employ 6.5 thousands persons.

Chart 3.1.2.5.2: Distribution of employees by enterprise size

Source: NISR, IBES 2016 Survey

3.1.2.6 Non-profit institutions serving households (NPISH)

A. Introduction

Non-profit institutions are legal or social entities, created for the purpose of producing goods and services, whose status does not permit them to be a source of income, profit or other financial gain for the units that establish, control or finance them. In practice, their productive activities are bound to generate either surpluses or deficits but any surpluses they happen to make cannot be appropriated by other institutional units. The articles of association by which they are established are drawn up in such a way that the institutional units that control or manage them are not entitled to a share in any profits or other income they receive. For this reason, they are frequently exempted from various kinds of taxes. IBES excludes all NPISH created by the government.

B. Analysis of NPISH activities

As described below in the following chart, 71.4 per cent of NPISH enterprises are engaged in other services activities while a few as 0.6 per cent are engaged in the Arts, entertainment and recreation services.

Chart 3.1.2.6.1: Distribution of enterprises by type

Source: NISR, IBES 2016 Survey

As most NPISH enterprises are in the other services, this implies that the same sector employs more persons than others. This is clearly shown by the below chart that shows that the other service sector employs 19.1 thousands persons.

Chart 3.1.2.6.2: Distribution of employees by enterprise size

Source: NISR, IBES 2016 Survey

Transfers from non-resident related or affiliated organisations have been the main source of the NPISHs income in 2016 as it contributed Frw 157.1 billion as shown by the table below.

Table 3.2.6.1: Income statement for NPISH sector, Frw billion

Income components	Education	Human health and social work activities	Arts, entertainment and recreation	Other service activities	Total
Membership fees	0.0	0.5	0.0	27.0	27.5
Transfers from government	0.6	11.8	0.5	3.0	15.9
Transfers from resident related or affiliated organization	0.1	32.9	0.0	34.0	67.1
Transfers from non-resident related or affiliated organisation	2.0	96.8	0.0	58.3	157.1

3.1.2.7 Acquisition and disposal of fixed assets

A. Introduction

All goods, except minor tools and equipment, expected to have a productive life of more than one year and intended for use by the establishment (land, mineral deposits, timber tracts, buildings, machinery, equipment and vehicles) are considered capital goods or fixed assets. Also included in this category are additions, modifications and improvements to existing fixed assets that extend their normal economic life or increase their productivity. Fixed assets may either be purchased or produced by the unit's own labour. In the latter case, the value of the asset is also given as an output. Also included are fixed assets purchased under financial lease, that is, where lease payments over the contract life will equal the asset's value.

B. Analysis of Acquisition and disposal of fixed assets

Table 3.2.7.1 below presents the acquisition and disposal of fixed assets in 2016. Opening values, net additions and closing values are distributed by different economic activities.

Table 3.1.2.7.1: Acquisition and disposal of fixed assets in 2016, Frw billion

Economic activity	Opening value	Net addition	Closing value
Mining and quarrying	13.1	-0.4	12.7
Manufacturing	491.9	38.2	530.1
Electricity, gas, steam and air conditioning supply	236.9	-5.9	231.0
Water supply; sewerage, waste management and remediation activities	65.3	-3.6	61.6
Construction	320.6	45.4	366.0
Wholesale and retail trade; repair of motor vehicles and motorcycles	174.4	66.1	240.5

Total	5	18	12,172

Source: NISR, IBES 2016 Survey

Based on the above Table 3.1.3.2, on average 13.0 out of 16 employees in the Information and communication industry are using a computer in their job whereas wholesale and retail trade; repair of motor vehicles and motorcycles records the least with on average 1.4 out of 5.0 employees who use a computer in their job.

Table 3.1.3.3: Distribution of enterprises with internet connection by size

Enterprise size	Yes	No	Total	Companies
Micro 1-3	31.4	68.6	100	4,073
Small 4-30	64.8	35.2	100	7,319
Medium 31-100	91.5	8.5	100	551
Big 100 +	98.3	1.7	100	230
Total	55.4	44.6	100	12,172

Source: NISR, IBES 2016 Survey

From the above Table 3.1.3.3, 98.3 per cent of big enterprises have an internet connection in their premises. However only 31.4 per cent of micro enterprises have an internet connection.

Table 3.1.3.4: Distribution of enterprises with internet connection by economic activity

Activity	Yes	No	Total	Companies
Mining and quarrying	32.2	67.8	100.0	87
Manufacturing	47.2	52.7	100.0	619
Electricity, gas, steam and air conditioning supply	87.5	12.5	100.0	8
Water supply; sewerage, waste management and remediation activities	64.9	32.4	100.0	37
Construction	100.0	0.0	100.0	119
Wholesale and retail trade; repair of motor vehicles and motorcycles	33.0	67.0	100.0	3,963
Transportation and storage	73.5	26.5	100.0	136
Accommodation and food service activities	41.9	58.1	100.0	985

Activity	Yes	No	Total	Companies
Information and communication	100.0	0.0	100.0	131
Financial and insurance activities	91.7	8.3	100.0	792
Real estate activities	77.0	23.0	100.0	126
Professional, scientific and technical activities	99.7	0.3	100.0	396
Administrative and support service activities	78.0	22.0	99.6	337
Education	67.0	33.0	100.0	1,206
Human health and social work activities	84.9	15.1	100.1	1296
Arts, entertainment and recreation	70.0	30.0	100.0	50
Other service activities	47.8	52.2	100.0	1,884
Total	55.4	44.6	100.0	12,172

Source: NISR, IBES 2016 Survey

Companies in the construction sector have internet connection on their premises at the level of 100 per cent while the Mining and Quarrying companies record the least with 32.2 per cent.

Table 3.1.3.5: Distribution of enterprises by type of internet used

Internet type	Yes	No	Total	Frequency
Wireless(WiFi)	43.5	56.5	100.0	6,748
Broadband(fiber optic)	7.8	92.2	100.0	6,748
Modem	68.0	32.0	100.0	6,748
VPN	2.3	97.7	100.0	6,748
Telephone	33.9	66.1	100.0	6,748
Total	31.1	68.9	100.0	6,748

Source: NISR, IBES 2016 Survey

As shown in the above Table, modem is used by 68.0 per cent of enterprises while only 2.3 per cent of enterprises are using VPN.

Table 3.1.3.6: Per cent distribution of enterprises by communication means used and enterprise size

Means of Communication	Micro 1-3	Small 4-30	Medium 31-100	Big 100 +	Total
Email address to communicate with clients or suppliers	17.2	69.8	8.8	4.3	100
Email portal	14.2	70.4	9.9	5.5	100
Own website	15.3	61.2	13.6	9.9	100
Total	15.9	68.5	9.9	5.6	100

Source: NISR, IBES 2016 Survey

As indicated by the above Table 3.1.3. 6, the small companies lead others in possessing email address (69.8 per cent), email portal (70.4 per cent) and website (61.2 per cent).

Table 3.1.3.7: Distribution of enterprises by what internet is used for

Internet use	Yes	No	Total	Companies
Make purchases for this enterprise	24.5	75.5	100	6,748
Deliver services to this enterprise's clients	38.2	61.8	100	6,748
Receipts from customers payments	21.6	78.4	100	6,748
Do research and develop ideas on new products	60.1	39.9	100	6,748
Advertise job vacancies	18.7	81.3	100	6,748
Declaration of taxes	88.1	11.9	100	6,748
Payment of taxes	50.3	49.7	100	6,748
Internet banking	33.7	66.3	100	6,748
Video conference	11.0	89.1	100	6,748
Staff training	15.0	85.0	100	6,748

Total	34.3	65.7	100	6,748

Source: NISR, IBES 2016 Survey

As described in the Table 3.1.3. 7 above, 88.1 per cent of companies use internet for taxes declaration while only 11.0 per cent are using it for video conferences

Table 3.1.3.8: Percent distribution of enterprises by internet use enterprise size

Internet use	Micro 1-3	Small 4-30	Medium 31-100	Big 100 +	Total
Make purchases for this enterprise	16.6	65.7	10.3	7.5	100
Deliver services to this enterprise's clients	16.4	68.4	9.5	5.7	100
Receipts from customers payments	12.0	70.6	9.6	7.8	100
Do research and develop ideas on new products	16.6	70.0	8.8	4.6	100
Advertise job vacancies	12.9	63.9	12.9	10.4	100
Declaration of taxes	19.0	69.5	7.8	3.8	100
Payment of taxes	20.7	65.7	8.9	4.8	100
Internet banking	15.7	66.1	11.7	6.6	100
Video conference	10.0	62.9	15.3	11.8	100
Staff training	11.7	63.7	14.9	9.8	100
Advertise company's products	11.5	62.6	14.5	11.4	100
Total	16.5	67.5	9.9	6.1	100

Source: NISR, IBES 2016 Survey

In harmony with the previous table, Table 3.1.3. 8 above indicates that small enterprises lead others in all internet usages.

3.1.3.3 Environment protection

The table below shows that in the total economy, 95.2 per cent of enterprises possess either scraps or waste while only 4.8 per cent do not. The activities of Electricity, gas, steam and air conditioning supply, Accommodation and food service activities and Manufacturing sectors seem to be above other sectors in terms of scraps and waste possession with 100, 99.9 and 99.7 per cent of their companies respectively.

Table 3.1.3.9: Distribution of enterprises economic activity and scraps or waste possession

Activity	Yes	No	Total	Companies
Mining and quarrying	82.8	17.2	100	87
Manufacturing	99.7	0.3	100	619
Electricity, gas, steam and air conditioning supply	100.0	0.0	100	8
Water supply; sewerage, waste management and remediation activities	70.3	27.0	100	37
Construction	89.9	10.1	100	119
Wholesale and retail trade; repair of motor vehicles and motorcycles	95.2	4.8	100	3,963
Transportation and storage	86.8	13.2	100	136
Accommodation and food service activities	99.9	0.1	100	985
Information and communication	99.2	0.8	100	131
Financial and insurance activities	93.7	6.3	100	792
Real estate activities	88.1	11.9	100	126
Professional, scientific and technical activities	81.1	19.2	100	396
Administrative and support service activities	89.9	10.1	100	337
Education	98.8	1.1	100	1,206
Human health and social work activities	97.1	2.9	100	1,296
Arts, entertainment and recreation	70.0	30.0	100	50
Other service activities	95.1	4.9	100	1,884
Total	95.2	4.8	100	12,172

Source: NISR, IBES 2016 Survey

Only the Arts, entertainment and recreation sector has a lowest percentage (70.0 of companies with scraps and waste possession).

Table 3.1.3.10: Percentage distribution of enterprises by type of scraps and waste and enterprise size

Type	Micro 1-3	Small 4-30	Medium 31-100	Big 100 +	Total
Solid	33.5	60.0	4.6	2.0	100
Liquid	9.9	75.7	9.5	4.9	100
Gas	27.6	27.7	26.5	18.2	100
Total	30.1	62.1	5.4	2.5	100

Source: NISR, IBES 2016 Survey

The table above illustrates that the majority of companies with scraps and waste possession are of small size (62.1 per cent) while big companies have a lower percentage of 2.5. The trend is the same for scraps and waste type as small companies dominate with 60.0, 75.7 for solid and liquid respectively, but for gas medium companies dominate with 26.5 per cent.

Table 3.1.3.11: Per cent distribution of enterprises by mode of disposal of scraps and waste

Mode of disposal	Yes	No	Total
Pay someone to remove the waste	59.7	40.4	100
Sells the waste	3.1	96.9	100
Dumping in free land	14.8	85.2	100
Discharging into river or streams	0.7	99.3	100
Burying in specified places or burning	28.7	71.3	100
Recycling	3.4	96.6	100
Total	18.4	81.6	100

Source: NISR, IBES 2016 Survey

From the above table, we can see that most companies pay someone to remove the waste as their mode of waste disposal (59.7), this method is followed by burying in specific places or burning them (28.7). The recycling is still at a lower level as only 3.4 per cent of companies use this mode of waste disposal. On the other hand discharging waste into rivers or streams is still low as only 0.7 per cent of companies are using this method. This may be considered as a good sign in terms of environmental protection.

Table 3.1.3.12: Percentage distribution of enterprises by water source

Source of water	Yes	No	Total
WASAC	60.3	39.7	100
Rainwater storage	15.9	84.1	100
Well	4.4	95.6	100
Lake or dam	1.5	98.5	100
Delivered by other in tank	2.5	97.5	100
Recycled water	0.5	99.6	100
Water from spring	7.0	93.0	100
Total	13.1	86.9	100

Source: NISR, IBES 2016 Survey

WASAC appears to be the main source of water for Rwandan enterprises with a percentage of 60.3, followed by rainwater storage (15.9 per cent) as shown in the table above the use of recycled water is still very low with only 0.5 per cent.

Table 3.1.3.13: Distribution of enterprises by economic activity and whether they store water or not

Activity	Yes	No	Total	Frequency
Mining and quarrying	28.9	71.1	100	12,172
Manufacturing	37.2	62.8	100	12,172
Electricity, gas, steam and air conditioning supply	75.0	25.0	100	12,172
Water supply; sewerage, waste management and remediation activities	10.9	89.1	100	12,172
Construction	53.5	46.5	100	12,172
Wholesale and retail trade; repair of motor vehicles and motorcycles	7.3	92.7	100	12,172
Transportation and storage	11.4	88.6	100	12,172
Accommodation and food service activities	51.7	48.4	100	12,172
Information and communication	22.8	77.2	100	12,172
Financial and insurance activities	48.7	51.4	100	12,172
Real estate activities	46.2	53.8	100	12,172
Professional, scientific and technical activities	9.3	90.7	100	12,172
Administrative and support service activities	14.0	86.0	100	12,172
Education	79.2	20.9	100	12,172
Human health and social work activities	70.9	29.2	100	12,172
Arts, entertainment and recreation	29.5	70.5	100	12,172
Other service activities	36.8	63.2	100	12,172
Total	35.2	64.8	100	12,172

Source: NISR, IBES 2016 Survey

Enterprises which store water represent 35.2 per cent of all enterprises, which rose up compared to previous year 2015 (30.5 per cent, see IBES 2015 Report). Some sectors are a step ahead of others in water storing. These include Education and Electricity, gas, steam and air conditioning supply for which 79.2 per cent and 75.0 per cent of their respective companies have water storing systems. The Wholesale and retail trade, repair of motor vehicles and motorcycles sector is below others with only 7.3 per cent of enterprises that store water.

Table 3.1.3.14: Per cent distribution of enterprises storing water by type of water storing device

Water storing Device	Yes	No	Total	Companies
Dam	0.6	99.4	100	12,172
Pond	3.3	96.7	100	12,172
Tanks	30.5	69.5	100	12,172
Others	0.2	99.9	100	12,172

Source: NISR, IBES 2016 Survey

The tank is the most possessed water storing device with a percentage of 30.5 while other storing devices are the least possessed devices with only 0.2 per cent of companies with water storing systems.

Table 3.1.3.15: Distribution of enterprises by economic activity and firewood as a main source of energy

Activity	Yes	No	Total	Companies
Mining and quarrying	21.7	78.3	100	87
Manufacturing	31.1	68.9	100	619
Electricity, gas, steam and air conditioning supply	0.0	100.0	100	8
Water supply; sewerage, waste management and remediation activities	0.0	100.0	100	37
Construction	0.0	100.0	100	119
Wholesale and retail trade; repair of motor vehicles and motorcycles	0.8	99.2	100	3,963
Transportation and storage	0.0	100.0	100	136
Accommodation and food service activities	22.1	77.9	100	985
Information and communication	0.0	100.0	100	131
Financial and insurance activities	0.0	100.0	100	792
Real estate activities	0.0	100.0	100	126
Professional, scientific and technical activities	0.0	100.0	100	396
Administrative and support service activities	0.0	100.0	100	337
Education	34.5	65.5	100	1,206
Human health and social work activities	13.1	86.9	100	1296
Arts, entertainment and recreation	28.3	71.7	100	50
Other service activities	14.9	85.1	100	1,884
Total	11.0	89.0	100	12,172

Source: NISR, IBES 2016 Survey

Education, Manufacturing and Arts, entertainment and recreation are the sectors in which firewood are mostly used with a percentage of 34.5, 31.1 and 28.3 of their companies respectively. In the total economy, the use of firewood as source of energy is at 11.0 per cent of surveyed enterprises.

Table 3.1.3.16: Volume of firewood used by economic activity

Activity	m ³	Companies
Mining and quarrying	1,322	19
Manufacturing	100,540	193
Wholesale and retail trade; repair of motor vehicles and motorcycles	740	32
Accommodation and food service activities	181,413	218
Education	97,524	416
Human health and social work activities	16,504	170
Arts, entertainment and recreation	27,154	14
Other service activities	6,871	281
Total	432,068	1,342

Source: NISR, IBES 2016 Survey

The volume of firewood used in 1,342 Rwandan enterprises is 432,068 m³. Accommodation and food service activities and Manufacturing enterprises are the most users of firewood with 181,413 and 100,540 m³ respectively while Wholesale and retail trade; repair of motor vehicles and motorcycles are the least users with 740 m³.

Table 3.1.3.17: Volume of firewood used by enterprise size

Enterprise size	m ³	Companies
Micro 1-3	89,198	40
Small 4-30	230,417	1121
Medium 31-100	61,624	154
Big 100 +	50,829	27
Total	432,068	1,342

Source: NISR, IBES 2016 Survey

Small and Micro enterprises are the one that use a bigger volume of firewood as they have used 230,417 and 89,198 cubic meters respectively from the total volume of 432,068 cubic meters used in the total economy.

3.1.3.4 Capacity utilization

Table 3.1.3.18: Capacity utilization mean in production units by economic activity in 2015

Activity	Utilization mean	Companies
Mining and quarrying	63	30
Manufacturing	65	546
Electricity, gas, steam and air conditioning supply	78	2
Water supply; sewerage, waste management and remediation activities	75	2
Construction	78	2
Wholesale and retail trade; repair of motor vehicles and motorcycles	53	21
Administrative and support service activities	96	15
Human health and social work activities	100	1
Arts, entertainment and recreation	75	3
Other service activities	80	11
Total	66	632

Source: NISR, IBES 2016 Survey

Among all sectors, capacity utilisation in production units stands at 66 per cent. Only Human health and social work activities and Administrative and support service activities seem to utilise their capacities at maximum with percentages of 100 and 95.9 respectively. Wholesale and retail trade; repair of motor vehicles and motorcycles is the least sector in terms of capacity utilisation as it only uses 53 per cent.

Table 3.1.3.19: Capacity utilization mean of production units by enterprise size in 2015

Enterprise size	Capacity utilization	Companies
Micro 1-3	63.3	91
Small 4-30	65.2	431
Medium 31-100	67.4	60
Big 100 +	75.3	51
Total	66.0	632

Source: NISR, IBES 2016 Survey

Taking into account the size of enterprises, big companies are ranked the first in capacity utilisation with a percentage of 75.3 as can be seen in the table above. The Micro enterprises are the least with only 63.3 per cent of their capacity used.

Table 3.1.3.20: Distribution of enterprises that are underutilizing their capacity by economic activity

Activity	Yes	No	Total	Companies
Mining and quarrying	69.8	30.2	100	30
Manufacturing	72.9	27.1	100	546
Electricity, gas, steam and air conditioning supply	50.0	50.0	100	2
Water supply; sewerage, waste management and remediation activities	50.0	50.0	100	2
Construction	100.0	0.0	100	2
Wholesale and retail trade; repair of motor vehicles and motorcycles	90.3	9.7	100	21
Administrative and support service activities	6.8	93.2	100	15
Human health and social work activities	0.0	100.0	100	1
Arts, entertainment and recreation	100.0	0.0	100	3
Other service activities	100.0	0.0	100	11
Total	72.2	27.8	100	632

Source: NISR, IBES 2016 Survey

At national level, the enterprises declared underutilizing their capacity represent 72.2 per cent. The manufacturing sector seems to have influenced this level as it shows a percentage of 72.9 with 546 over 632 companies that have answered this question.

Table 3.1.3.21: Reasons of capacity underutilization

Reasons of underutilization	Yes	No	Total
Low Demand	75.9	24.1	100
Unreliable supply of power	15.4	84.6	100
Unreliable supply of inputs	44.4	55.6	100
Lack of skilled workers	21.0	79.0	100
Bottleneck in the production line	9.2	90.8	100
Lack of working capital	34.6	65.4	100
Labor market regulations	13.9	86.1	100
Lack of necessary specialized technology, machinery & spare parts	29.4	70.6	100
Old equipment	24.0	76.0	100
other	17.3	82.7	100
Total	28.5	71.5	100

Source: NISR, IBES 2016 Survey

The table above shows that the main reason of capacity underutilization is the low demand as reported by 75.9 per cent of all the respondents. It is followed by the unreliable supply of inputs by 44.4 per cent of enterprises. The least mentioned reason is the Bottleneck in the production line with 9.2 per cent.

3.1.3.5 Access to Rwandan produced raw materials

Table 3.1.3.22: Production units by whether they use Rwandan raw materials and by economic activity

Activity	Yes	No	Total	Companies
Mining and quarrying	86.6	13.4	100	30
Manufacturing	67.1	32.9	100	546
Electricity, gas, steam and air conditioning supply	100.0	0.0	100	2
Water supply; sewerage, waste management and remediation activities	50.0	50.0	100	2
Construction	100.0	0.0	100	2
Wholesale and retail trade; repair of motor vehicles and motorcycles	90.3	9.7	100	21
Administrative and support service activities	0.0	100.0	100	15
Human health and social work activities	100.0	0.0	100	1
Arts, entertainment and recreation	100.0	0.0	100	3
Other service activities	0.0	100.0	100	11
Total	66.4	33.6	100	632

Source: NISR, IBES 2016 Survey

The use of Rwandan raw materials is at the level of 66.4 per cent. The main driver of this percentage appears to be the manufacturing sector with a number of 546 companies out of 632 interviewed and a percentage of 67.1. The least user of local raw materials is the Administrative and support service activities and other service activities as they all have 0 percentage out of 15 and 11 concerned enterprises respectively.

Table 3.1.3.23: Production units using Rwandan raw materials by importance and economic activity

Activity	Not important	Somewhat important	Important	Very important	Total	Freq.
Mining and quarrying	3.9	7.7	38.7	49.7	100	26
Manufacturing	4.1	17.9	27.4	50.5	100	366
Electricity, gas, steam and air conditioning supply	0.0	0.0	0.0	100.0	100	2
Water supply; sewerage, waste management and remediation activities	0.0	0.0	0.0	100.0	100	1
Construction	0.0	0.0	0.0	100.0	100	2
Wholesale and retail trade; repair of motor vehicles and motorcycles	0.0	5.4	73.2	21.4	100	19
Human health and social work activities	100.0	0.0	0.0	0.0	100	1
Arts, entertainment and recreation	0.0	0.0	100.0	0.0	100	3
Total	4.1	16.4	30.3	49.3	100	420

Source: NISR, IBES 2016 Survey

The use of Rwandan raw materials is very important in 49.3 per cent of concerned enterprises. The construction sector, Electricity, gas, steam and air conditioning supply and Water supply; sewerage, waste management and remediation activities like local raw materials with 100 per cent.

Table 3.1.3.24: Quality rating of Rwandan raw materials by economic activity

Activity	Low	Somewhat low	Somewhat high	High	Total	Freq.
Mining and quarrying	3.9	11.6	34.8	49.7	100	26
Manufacturing	1.1	17.7	30.3	50.9	100	366
Electricity, gas, steam and air conditioning supply	0.0	0.0	0.0	100	100	2
Water supply; sewerage, waste management and remediation activities	0.0	100.0	0.0	0.0	100	1
Construction	0.0	0.0	0.0	100.0	100	2
Wholesale and retail trade; repair of motor vehicles and motorcycles	0.0	83.9	10.7	5.4	100	19
Human health and social work activities	100.0	0.0	0.0	0.0	100	1
Arts, entertainment and recreation	0.0	0.0	66.7	33.3	100	3
Total	1.4	20.1	29.6	48.9	100	420

Source: NISR, IBES 2016 Survey

Rwandan raw materials are rated as of high quality (at 100 percent) for electricity, gas, steam and air conditioning supply and Construction sectors.

3.1.3.6 Access to reliable power

The table below shows that 75.6 per cent of enterprises were connected to the national power grid.

Table 3.1.3.25: Distribution of production units by whether they are connected to the national power grid or not

Activity	Yes	No	Total	Freq.
Mining and quarrying	36.9	63.1	100	30

3.2 Informal sector

This section provides an overview of the structure of informal economic activity as reported in the IBES 2016. In addition, as noted earlier, an Establishment Census (EC) was also undertaken in 2014 which provided information on the informal sector. The census indicated that there are some 137,251 informal enterprises at the time the listing for the census was compiled, and the number of employees working in these enterprises was 209,863 (covering enterprises in all activities excluding Agriculture, Public Administration, Education and Health and Social Work). In the tables of this report section the estimates from the IBES 2016 sample survey are presented as percentages of this estimated total number of informal enterprises (or estimated total number of employees).

The IBES 2016 informal survey was undertaken from 24th August 2017 to 23rd February, 2018. The sample was therefore not selected directly from the Census listing. There are therefore some differences in the structure of the sample when compared to the EC. For example, comparing the percentage of micro-enterprises (i.e. those with

three or fewer employees), the EC gives a figure of 96.4 percent while, based on the IBES 2016 sample, the estimate is 94.8 percent.

Given the nature of informal businesses, notably that they are not registered for tax purposes, the actual total number of such enterprises in Rwanda is difficult to estimate with certainty. The IBES 2016 survey of these enterprises was therefore designed to produce estimates of the composition of activity, rather than an estimate of the levels. NISR remains committed to improving these estimates, which will be achieved in part through further surveys of the informal sector, but also by utilizing information from a wider set of data sources, including data on international imports and exports, the Agricultural Survey, and the Integrated Household Living Conditions Survey (Enquête Intégrale sur les Conditions de Vie des Ménages, EICV).

Table 3.2.1 shows the percentage distribution of informal enterprises by province and by ownership. For example, 17.8 per cent of all informal enterprises in Rwanda are estimated to be in the Northern Province and owned by Rwandan residents.

Table 3.2.1: Percentage distribution of informal enterprises by province and ownership¹

Province	Resident Rwandans	Resident foreigners	Non-resident	Total
Kigali	16.0	0.2	0.1	16.3
South	9.8	0.0	0.0	9.8
West	32.5	0.0	-	32.5
North	17.8	0.0	-	17.8
East	23.5	0.2	-	23.7
Total	99.5	0.4	0.1	100

Source: NISR, IBES 2016 Survey

Note1: The estimated total number of informal enterprises based on the Informal IBES-2016 is 175,643.

Table 3.2.2 shows the percentage distribution of informal enterprises by activity and by ownership. For example, 49.0 per cent of all informal enterprises in Rwanda are estimated to be in Wholesale and retail trade, and owned by Rwanda residents.

Table 3.2.7 presents the distribution of informal enterprises by economic activity and years in operations. 52.0 per cent of all informal businesses in 2016 had less than three years of operations while 1.0 per cent was in existence of 20 years and above.

Table 3.2.8: Percentage distribution of informal enterprises by enterprise size and years in operation

Enterprise size / Years in operations	<3	3-5	6-9	10-14	15-19	>=20	Total
<=3	57.0	25.0	9.0	5.0	4.0	0.0	100
>3, <=9	31.0	38.0	25.0	4.0	1.0	0.0	100
>9, <=19	6.0	34.0	12.0	46.0	1.0	1.0	100
>19, <=99	14.0	14.0	49.0	22.0	0.0	0.0	100
100+	0.0	0.0	0.0	100.0	0.0	0.0	100
Total	56.0	26.0	10.0	5.0	4.0	0.0	100

Source: NISR, IBES 2016 Survey

Table 3.2.8 highlights the distribution of informal enterprises by enterprise size and Years in operation. Medium informal businesses are younger than other where 56 per cent had less than 3 year of operations in 2017.

CHAPTER 4: Key concepts and data collection methodology

4.1 Distinction between Enterprise and Establishment

An enterprise is an institutional unit as a producer of goods and services. It has the autonomy in decision-making and allocating resources. It may be engaged in one or more economic (productive) activities. It can be a corporate or non-corporate enterprise. An establishment is an enterprise or part of the enterprise located in a single location and normally a single economic activity is carried out in the establishment. It is to be noted that in the majority of the cases, and particularly for the smaller or medium-sized units, enterprise and establishment are identical. Efforts were made to list and record details for each enterprise including all its branches. Information on whether or not the establishment was part of an enterprise was also recorded

4.2 Activity Coverage and Listing of Enterprises

The IBES considered only non-agricultural activities. Agricultural activities- the primary production of agricultural and plantation crops, livestock and poultry, agricultural services, forestry and fishing were not covered. Activities relating to the processing of the primary produce of agricultural and allied activities were treated as non-agricultural. The sale of agricultural produce by the producer himself directly to wholesalers, retailers, or even consumers was considered agricultural.

Detailed guidelines were provided to determine the broad activity category of an enterprise. Some are reproduced here. Manufacturing involves the transformation of raw materials into finished products. Trade is an act of purchase of goods and their resale, either wholesale or retail, without any intermediate physical transformation of the goods. A hotel (Division 55 of ISIC-4) provides accommodation with or without arrangements for meals, other prepared food and refreshments. A restaurant (Division 56 of ISIC-4) generally provides eating and drinking services where prepared meals, food, and refreshment and other snacks are sold for immediate consumption without any provision for lodging. Such enterprises are variously known as restaurants, cafes, cafeteria, snack bar, lunch counters, refreshment stands, milk bar, canteens etc. Bars and other drinking places also come under this category.

Transport is the act of carrying passengers and/or goods from one place to another. The operation of storage and warehouses on hire to the farm producer, dealer or trader, processor and manufacturing enterprises, including the general public, as a business is in the storage and warehousing industry (Division 52 of ISIC-4). But warehouses meant for storing farm produce, trading commodities, manufactured goods etc., owned by the owner of the farm, trader or manufacturer himself, were not treated as storage and warehousing.

4.3 Items of Information and Related Concepts

Apart from collecting background information IBES collects data on the number of people the enterprise employs and how much it pays them, its operating expenses and receipts, the value of fixed assets, and its outstanding loans.

- **Method of data collection:** this depended on whether the enterprise maintained accounts. If it did, data were collected from them. Otherwise, the information was

collected orally, as reported by the respondent. In both cases, primary field workers visited the sites of the enterprises and collected data from the respondents by interviewing them. Key concepts and methodology involved in data collection are discussed below.

- **Reference year/last year:** For most of the items, namely compensation, operating expenses/inputs, and receipts/output, the reference or last year meant last accounting year for the enterprises maintaining accounts and the previous 12 months for those not maintaining accounts.

- **Last day of the year:** Information on the value of fixed assets and outstanding loans related to the last day of the year. 'Last day' meant the closing day of the last accounting year for enterprises maintaining accounts. In other cases, it was the day preceding the date of survey.

- **Background information about the enterprise:** Certain background information about the enterprise was collected first. These included broad activity of the enterprise for which 12 codes were provided, main activity of the enterprise in terms of 4-digit code as per ISIC-Rev 4, location (within permanent structure or within temporary structure or without any structure), ownership status, whether registered under any Act, age of the enterprise, if received any government assistance during last 2 years, nature of problem faced during last year, whether accounts maintained, and whether establishment was part of an enterprise in case of an establishment.

- **Employment and compensation of employees:** As regards the employment position, data on average number of workers working per day during the major period of working in the last year were collected. Break-up of number of paid and unpaid workers was also recorded. Paid workers were those who got regular salary or wages. Break-up employment was also noted by (a) sex, (b) occupation (i.e. manager/professional/administrative and others), and (c) nationals or foreigners. Compensation payable to the workers included wages/salaries to hired workers and other remunerations in the form of providing food, canteen facility, health care facility or other facilities to its workers.

Given the importance of employment related statistics, a specific module (Labor Module) was designed to cover all the details judged to be important.

- **Operating expenses:** All the expenses incurred by the enterprise during last year including (a) compensation to workers, (b) rent on hired land and building (if any) and (c) interest payable on loan (if any) were covered under the head of expenditure. The relevant information was collected through two sections of the questionnaire module— one giving the details of the main inputs/raw materials used by the enterprise and the other recording the residual operating expenses involved in the day to day running of the enterprise. Value figures were recorded at the purchase price of raw materials and other inputs.

- **Income:** Information on income was also collected through two sections of the questionnaire – one furnishing details of the main receipts of the enterprise directly associated with the value of goods and services produced while the other recording other receipts of the enterprise. Valuation of income was at the sale value if sold or at

the market value of goods made ready for sale in the market or at producer's prices for manufactured goods.

- **Fixed assets:** Information on value of fixed assets as on last day of the year was collected. It was the book value if the enterprise maintained accounts otherwise it was the market value of the asset owned or rented/hired. This apart, data on net addition to fixed assets and rent payable for hired assets were also collected.

Appendix 1: Rwanda Classification of Products by Activity, Level 2

<i>RC PA</i>	<i>Rwanda Classification of products by Activity</i>	<i>RC PA</i>	<i>Rwanda Classification of products by Activity</i>
A1	Food crops	H1	Land transport
A2	Export crops	H2	Air transport
