## Labour Force Survey Data, March and 1<sup>st</sup> Quarter of 2018

## **Seasonally Adjusted Data**

It should be noted that the data in the seasonally adjusted series are partially based on past data from the quarterly labour force survey, so these series may change in the future after they are fully replaced by series based on the monthly labour force survey.

## In March 2018: (For monthly data 3/2018)

- Unemployment rate among persons aged 15 and over from the labour force 3.6% (compared with 3.8% in February 2018).
- Participation rate in the labour force among persons aged 15 and over 63.5% (compared with 64.2% in February 2018).
- Employment rate (the percentage of employed persons out of the total population) among persons aged 15 and over – 61.3% (compared with 61.8% in February 2018).

## In the 1<sup>st</sup> quarter of 2018 (January-March): (For quarterly data 1/2018)

- Unemployment rate among persons aged 15 and over from the labour force 3.7% (compared with 4.1% in the 4<sup>th</sup> quarter of 2017).
- Participation rate in the labour force among persons aged 15 and over 63.8% (compared with 64.0% in the 4<sup>th</sup> quarter of 2017).
- Employment rate among persons aged 15 and over 61.4% (compared with 61.3% in the 4<sup>th</sup> quarter of 2017).

## Written by Mark Feldman, Director of Labour Sector tel: 02-6592815 For explanations and clarifications, please contact also to the Press Relations Unit, at 02-6527845

- Unemployment rate among persons aged 25-64 from the labour force 3.2% (compared with 3.6% in the 4<sup>th</sup> quarter of 2017).
- Participation rate in the labour force among persons aged 25-64 80.0% (compared with 80.2% in the 4<sup>th</sup> quarter of 2017).
- Employment rate among persons aged 25-64 77.4% (same as in the 4<sup>th</sup> quarter of 2017).
- The share of employed persons usually working full time out of total employed persons – 77.9% (same as in the 4<sup>th</sup> quarter of 2017).

The Labour Force Survey is the main source of information regarding the labour force in Israel, and is conducted by the Central Bureau of Statistics on an ongoing basis.

Starting from the beginning of 2018, an average of 19,500 persons aged 15 and over a month have been interviewed on an ongoing basis. The survey population includes the permanent population of Israel, as well as tourists and temporary residents living in Israel continuously for more than one year. The survey follows the development of the labour force in Israel, its size and characteristics, the extent of unemployment, etc.

## March 2017 - Seasonally Adjusted Data

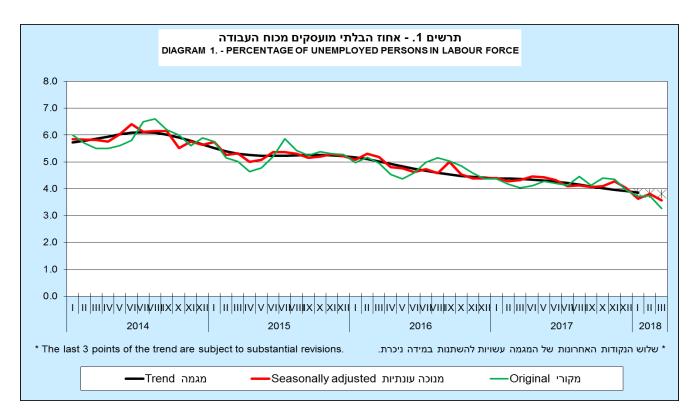

In March 2018, **the number of persons in the labour force** among persons **aged 15 and over** was **4.019 million**. Of these, 3.875 million were **employed** and approximately 144,000 were **unemployed**. Among employed persons, 2.030 million were **males** (compared with 2.042 in February 2018) and 1.845 million were **females** (compared with 1.859 million in February 2018).

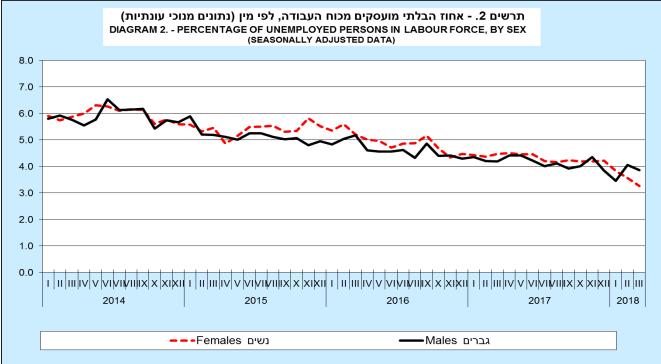

**The participation rate among persons aged 15 and over in the labour force** in March 2018 declined to 63.5% (compared with 64.2% in February 2018). Among **males** (see Diagram 3), that rate declined to 68.3% (compared with 68.9% in the previous month), and among **females** it declined to 59.0% (compared with 59.7% in the previous month).

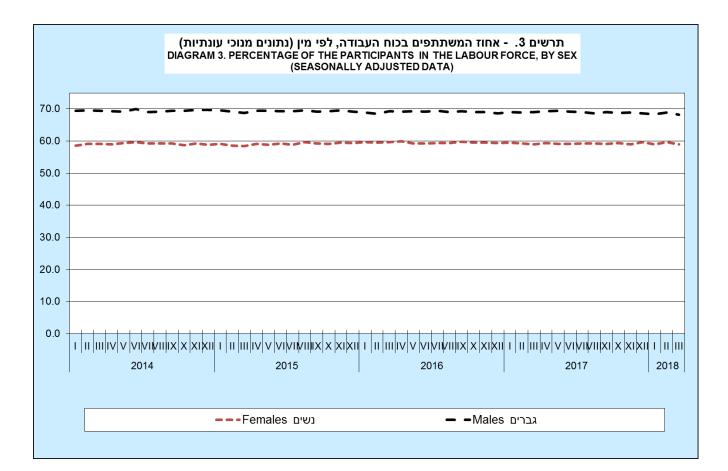

The unemployment rate among persons aged 15 and over from the labour force (see Diagram 1), declined to 3.6% in March 2018 (compared with 3.8% in February 2018). The unemployment rate of **males** (see Diagram 2) declined to 3.9% (compared with 4.0% in the previous month), and among **females** it declined to 3.3% (compared with 3.6% in the previous month).

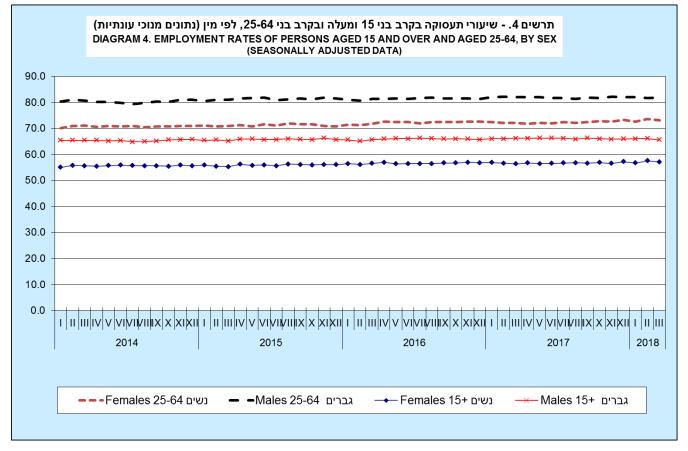

**The employment rate** (calculated as the percentage of employed persons out of the entire population) **among persons aged 15 and over** declined to 61.3% in March 2018 (compared

with 61.8% in February 2018). The employment rate among **males** (see Diagram 4) declined to 65.6% (compared with 66.2% in the previous month), and that of **females** declined to 57.1% (compared with 57.6% in the previous month).

## 1<sup>st</sup> Quarter Average (January-March) 2018 - Seasonally Adjusted Data

In the 1<sup>st</sup> quarter of 2018, **the number of persons in the labour force** among persons **aged 15 and over** was 4.028 million. Of these, 3.880 million were **employed** and approximately 148,000 were **unemployed**. Among the employed persons, 2.037 million were **males** (compared with 2.030 million in the 4<sup>th</sup> quarter of 2017) and 1.843 million were **females** (compared with 1.825 million in the 4<sup>th</sup> quarter of 2017).

**The participation rate among persons aged 15 and over in the labour force** in the 1<sup>st</sup> quarter of 2018 declined to 63.8% (compared with 64.0% in the 4<sup>th</sup> quarter of 2017). Among **males**, the rate declined to 68.5% (compared with 68.8% in the previous quarter), and among **females** the rate declined to 59.2% (compared with 59.4% in the previous quarter).

**The unemployment rate among persons aged 15 and over from the labour force** in the 1<sup>st</sup> quarter of 2018 declined to 3.7% (compared with 4.1% in the 4<sup>th</sup> quarter of 2017). The unemployment rate of **males** declined to 3.8% (compared with 4.1% in the previous quarter), and that of **females** declined to 3.5% (compared with 4.2% in the previous quarter).

**Among persons aged 25-64 the participation rate in the labour force** in the 1<sup>st</sup> quarter of 2018 declined to 80.0% (compared with 80.2% in the 4<sup>th</sup> quarter of 2017). Among **males aged 25-64** the rate declined to 84.7% (compared with 85.0% in the previous quarter), and among **females aged 25-64** the rate declined to 75.4% (compared with 75.6% in the previous quarter).

**Among persons aged 25-64 the unemployment rate from the labour force** in the 1<sup>st</sup> quarter of 2018 declined to 3.2% (compared with 3.6% in the 4<sup>th</sup> quarter of 2017). Among **males aged 25-64** the unemployment rate declined to 3.3% (compared with 3.6% in the previous quarter), and among **females aged 25-64** the unemployment rate declined to 3.0% (compared with 3.6% in the previous quarter).

**The number of employed persons** in the 1<sup>st</sup> quarter of 2018 reached 3.880 million (compared with 3.854 million in the 4<sup>th</sup> quarter of 2017). The number of **employed persons who** <u>usually</u> worked full time (35 hours and over per week) increased by 0.6% compared with the 4<sup>th</sup> quarter of 2017 (an addition of approximately 17,000 employed persons), and the number of **employed persons who** <u>usually</u> worked part time (less than 35 hours per week) increased by 1.1% compared with the 4<sup>th</sup> quarter of 2017 (an addition of approximately 9,000 employed persons). The share of those usually employed full time of all employed persons reached 77.9% (same as in the previous quarter). Among males that share declined to 86.8% (compared with 86.9% in previous quarter), whereas among **females** it reached 68.0% (same as in the previous quarter). (Detailed figures can be found in Tables 1.24-1.26 in the "Labour Force Survey Quarterly – Labour Force and Wages Statistics" on the website).

The number of **persons who worked full time (35 hours and over)** <u>in the determinant week</u> decreased by 1.3%, compared with the 4<sup>th</sup> quarter of 2017 (a decrease of approximately 34,000 employed persons), whereas the number of **persons who worked part time (less than 35 hours)** <u>in the determinant week</u> increased by 1.7%, compared with the 4<sup>th</sup> quarter of 2017 (an addition of approximately 17,000 employed persons). The number of **persons temporarily absent from work** in the determinant week in the 1<sup>st</sup> quarter of 2018 increased by 9.9%, compared with the 4<sup>th</sup> quarter of 2017 (an addition of approximately 17,000 employed persons). (Detailed figures can be found in Tables 1.4-1.6 in the "Labour Force Survey Quarterly – Labour Force and Wages Statistics" on the website).

The employment rate (calculated as the percentage of employed persons out of the entire population) among persons aged 15 and over in the 1<sup>st</sup> quarter of 2018 rose to 61.4% (compared with 61.3% in the previous quarter). The employment rate among males aged 15 and over declined to 65.9% (compared with 66.0% in the previous quarter), whereas the employment rate among females aged 15 and over rose to 57.1% (compared with 56.9% in the previous quarter). Among persons aged 25-64 the employment rate reached 77.4% (same as in the previous quarter). Among males aged 25-64 the employment rate declined to 81.9% (compared with 82.0% in the previous quarter), whereas among females aged 25-64 the employment rate rose to 73.2% (compared with 72.9% in the previous quarter). (Detailed figures can be found in Table 1.23 in the "Labour Force Survey Quarterly – Labour Force and Wages Statistics" on the website).

**The average weekly number of work hours per employed person** declined to 36.2 in the 1<sup>st</sup> quarter of 2018 (compared with 36.4 hours in the previous quarter). **The average weekly number of work hours per employee** declined to 36.2 in the 1<sup>st</sup> quarter of 2018 (compared with 36.47 hours in the previous quarter).

**Employees working part time involuntarily – original data.** As of 2018, the definition of **employees working part time involuntarily**<sup>1</sup> was changed following the transition to a new and expanded questionnaire. The number of **employees working part time involuntarily** 

<sup>&</sup>lt;sup>1</sup> Until 2017: those usually working less than 35 hours per week, because they sought but did not find full-time or additional work.

As of 2018: those usually working less than 35 hours per week, who are interested in working more than 35 hours and actively sought to work more hours in the last four weeks.

reached approximately 58,000 in the 1<sup>st</sup> quarter of 2018, and their share out of all employed persons was 1.5%. The share of **males working part time involuntarily**, out of all employed males, was 1.0%, and the share of **females working part time involuntarily**, out of all employed females, was 2.0%. (Detailed figures can be found in Table 2.9 in the "Labour Force Survey Quarterly – Labour Force and Wages Statistics" on the website).

## Labour Force Characteristics by District of Residence

(Detailed figures can be found in Tables 1.11-1.16 in the "<u>Labour Force Survey Quarterly –</u> <u>Labour Force and Wages Statistics</u>" on the website).

**The unemployment rate among persons aged 15 and over** declined in the 1<sup>st</sup> quarter of 2018 in most of the districts compared with the 4<sup>th</sup> quarter of 2017 and reached 3.5% in the **Jerusalem District** (compared with 4.4%), 3.9% in the **Northern District** (compared with 4.1%), 3.4% in the **Haifa District** (compared with 4.9%), 3.5% in the **Central District** (compared with 3.6%), 3.0% in the **Tel Aviv District** (compared with 4.0%), 5.0% in the **Southern District** (compared with 4.9%).

**The participation rate among persons aged 15 and over in the labour force** declined in half of the districts in the 1<sup>st</sup> quarter of 2018 compared with the 4<sup>th</sup> quarter of 2017. The participation rate reached 55.2% in the **Jerusalem District** (compared with 56.3%), 58.3% in the **Northern District** (compared with 57.8%), 62.3% in the **Haifa District** (compared with 62.6%), 69.3% in the **Central District** (compared with 69.6%), 69.3% in the **Tel Aviv District** (compared with 69.0%), 61.0% in the **Southern District** (compared with 60.2%).

**The employment rate among persons aged 15 and over** rose in most of the districts in the 1<sup>st</sup> quarter of 2018 compared with the 4<sup>th</sup> quarter of 2017. The employment rate reached 53.2% in the **Jerusalem District** (compared with 53.8%), 56.0% in the **Northern District** (compared with **5**5.5%), 60.2% in the **Haifa District** (compared with 59.**5**%), 66.9% in the **Central District** (compared with 67.**0**%), 67.2% in the **Tel Aviv District** (compared with 66.2%), 57.9% in the **Southern District** (compared with 57.3%).

## Employed Persons by Industry (<u>By the new classification of All Economic Activities</u> (Updated edition), Technical Publication no. 80)

(Detailed figures can be found in Tables 2.1 and 2.5 in the "<u>Labour Force Survey Quarterly –</u> <u>Labour Force and Wages Statistics</u>" on the website).

In the 1<sup>st</sup> quarter of 2018 the number of **employed persons** increased by approximately 26,000 compared with the 4<sup>th</sup> quarter of 2017. The number of **employees** in the 1<sup>st</sup> quarter of

2018 reached 3.397 million (compared with 3.362 million in the 4<sup>th</sup> quarter of 2017). Table 1 below presents the number of employed persons and employees by industry in the 1<sup>st</sup> quarter of 2018 and 4<sup>th</sup> quarter of 2017.

Among employed persons, the greatest increases were in Manufacturing; Mining and quarrying (approximately 14,000 employed persons), Local, public and defence administration and social security and Human health and social work activities (approximately 9,000 employed persons in each industry), Real estate activities (approximately 7,000 employed persons), Accommodation and food service activities (approximately 6,000 employed persons), (approximately 6,000 employed persons), Transportation and storage, postal and courier activities and Arts, entertainment and recreation (approximately 4,000 employed persons in each industry).

The greatest **decreases** were in **Construction** and **Agriculture**, **forestry and fishing** (approximately 5,000 employed persons in each industry), **Wholesale and retail trade; repair of motor vehicles** (approximately 4,000 employed persons), **Education** and **Professional**, **scientific and technical activities** (approximately 3,000 employed persons in each industry).

Among employees, the greatest increases were in Manufacturing; Mining and quarrying (approximately 11,000 employees), Accommodation and food service activities, Local, public and defence administration and social security and Real estate activities (approximately 7,000 employees in each industry), Transportation and storage, postal and courier activities, Human health and social work activities and Information and communication (approximately 6,000 employees in each industry), Arts, entertainment and recreation (approximately 5,000 employees), Financial and insurance activities and Professional, scientific and technical activities (approximately 4,000 employees in each industry).

The greatest **decreases** were in **Other service activities** (approximately 8,000 employees), **Education** and **Construction** (approximately 4,000 employees in each industry).

(1) Incl. employed persons or employees in the industry "Extra-Territorial Organizations and Bodies" (Category U), and persons whose industry is not known.

Employed Persons by Occupation (By the new classification of Occupations, Technical Publication no. 81) (Detailed figures can be found in Tables 2.10 and 2.14 in the "Labour

Force Survey Quarterly - Labour Force and Wages Statistics" on the website).

Table 2 below presents the number of employed persons and employees by occupation in the 1<sup>st</sup> quarter of 2018 and 4<sup>th</sup> quarter of 2017.

Among **employed persons**, the greatest **increases** were among **Service and sales workers** (approximately 40,000 employed persons), **Professionals** (approximately 23,000 employed persons) and **Managers** (approximately 12,000 employed persons).

The greatest **decreases** were in **Skilled workers in manufacturing and construction, and other skilled workers** (approximately 16,000 employed persons), **Practical engineers, technicians, agents and associate professionals** (9,000 employed persons).

Among **employees**, the greatest **increases** were in **Service and sales workers** (approximately 30,000 employees), **Professionals** (approximately 22,000 employees) and **Managers** (approximately 12,000 employees).

The greatest decreases were in Skilled workers in manufacturing and construction, and other skilled workers (14,000 employees), Practical engineers, technicians, agents and associate professionals (approximately 6,000 employees).

Definitions and Explanations

## METHODS:

As of 2012 the format of the Labour Force Survey changed from a quarterly survey to a monthly survey.

## Panels and their Mode of Investigation

The sample drawn each year is divided into four mutually exclusive groups, known as panels. The panels are introduced into the survey investigation in four consecutive quarters, one panel in each period. Each panel is investigated for a number of periods, sometimes with a break between the investigations. Since the new survey is monthly, the annual sample is divided into twelve panels. The difference between the different rotation methods of panels is in the percentage of overlap between consecutive months, between parallel months of consecutive quarters, or between parallel months of consecutive years.

Therefore, the investigative format of panels has an impact on sampling errors of the various estimates. Generally, it can be said that the larger the overlap of the panels between two periods of time, the smaller the sampling error of the estimates of change between periods (for example, change in the number of unemployed persons between month t and month t-1), in comparison with exclusive samples of the same size. Regarding estimates on the quarterly or annual level – the larger the overlap between the months, the greater the sampling error of the quarterly or annual estimate, in comparison to that estimate if it were based on exclusive samples of the same size.

The monthly rotational structure of panels, known as 4-8-4, is appropriate for determining priorities for estimates of change of different periods. The Labour Force Survey in the USA uses this structure as well. In the rotational structure, eight investigations are performed for each panel, in the following way: Investigation in the introduction month and the three following months (investigations 1-4), a break of eight months and four more consecutive investigations in the following months (investigations 5-8), in months parallel to the first months of investigation.

As can be seen in Table C, each month is composed of eight panels, two of which were not investigated in the previous month (one of them is returning from a rest of eight months and one is new), and the rest were investigated. Each quarter includes twelve exclusive panels, of those, four were investigated only once, four were investigated twice, and the rest were investigated three times. Each year includes twenty-seven exclusive panels in total, of those, eighteen are investigated four times consecutively, and the rest are investigated less. The introductory month to the survey and the exit month from the survey are separated by sixteen months for each panel, and therefore, no panel will be investigated eight times during one year. For each two consecutive months, there are six common panels and two exclusive ones,

1

one of them old and the second one new. For each two parallel months, separated by a quarter, there are two common panels and six exclusive ones. For each two parallel months of consecutive years there are four common panels and four exclusive panels.

 Table C. Example of Investigation of Panels in the 4-8-4 Structure

## <u>Sampling</u>

Most of the survey population is covered by current samples generally drawn once a year. A small part of the population whose characteristics do not change over time is covered by permanent samples taken from the 2008 Census.

### **Current Samples**

## Sampling Fraction

The survey is planned so that in each panel a sample of approximately 1,500 dwellings should be obtained. At the stage of planning the yearly sample, the sampling fraction, expressing the relationship between the planned sample size and the population size of that year, is determined. The sampling fraction is the same for all population groups, but can change between sampling years. The size of the obtained sample is a little more than 0.7% of the household population.

## The Main Sampling Method

Most of the final sampling units are dwellings, which are sampled in a two-stage method. In the first stage, localities are sampled, with probability proportional to size. In the second stage, dwellings are sampled in the sampled localities, so that the final sampling probability of the dwelling is equivalent to the sampling fraction of that year. The sampled dwellings are placed in sampling "portions" of approximately eight to nine dwellings and each portion is allocated to a panel, and assigned a fixed determinant week.

## First stage - sampling of localities

The sample of localities in the survey is taken from a list of localities (the locality sampling frame), and the localities are placed in three main groups, according to their size:

a. Very large localities are included in the entire sample year (with certainty) in all twelve panels. This group includes less than 40 localities, however, approximately 70% of the survey population are concentrated in them.

b. Medium sized and large urban localities are included in the entire sample year (with certainty) in one panel, two, three, four, six or nine panels, but not in all the panels. The larger the locality is, the larger the number of panels that are in it. Annually, close to 100 localities of this type are sampled, and their population comprises approximately 20% of the survey population.

c. Small localities, urban and rural, are called probability localities in the sample format. These localities are divided into homogeneous groups, called sampling strata, similar to the geographical groupings used for determining the weights of the survey (see detailed geographic groupings in Table E, "Estimation Method", below) and according to other characteristics. The localities are arranged in each stratum according to various characteristics and a systematic random sample is drawn, the probability of each locality to be sampled being proportional to its size. Thus, these localities are known as "probability localities". The sample in each locality is usually placed in one panel. Each year a sample of localities is taken, dependent on the previous year's sample, to

ensure that as many different localities as possible are included in the samples of two adjacent years, which are sometimes investigated in the same months more than once. Altogether, each year approximately 200 "probability" localities are sampled out of approximately 1,100 localities in the frame.

#### Stage two - sampling within the sampled localities

In every locality that is sampled, a sample of residential dwellings is taken, although sometimes (mostly in non-urban localities) households or other units are sampled. The sampling is done as follows:

a. Sampling from municipal tax files – each year, a sample of dwellings is taken from the frame obtained from the Dwelling and Buildings Register of the CBS, for approximately 180 of the larger localities. This Register is constructed from the municipal tax files of localities. In every file, on each record (property) there are means of identification (number in the locality, address and name of resident), type of property (such as the use for which the property is designated – residential or other). Records of non-residential property are deleted from the file, so that the sampling frame includes only residential dwellings. The records in the file undergo a procedure of coding the addresses and anchoring them, so that by the end of the procedure the statistical area (the locality's internal geographic division) of each record is known as well. This division is usually for localities with approximately 15,000 residents or more. The dwellings are then arranged geographically, in which the statistical area is usually the main geographical characteristic. After sorting the records, a systematic random sample is taken. In other words, a random beginning is chosen, which determines the first dwelling sampled, and the rest of the dwellings in the sample are determined by fixed jumps. By this method, a random sample of dwellings spread over all the locality and all the statistical area of the locality is obtained.

b. Sampling from lists of households – Most of the villages, moshavim, and some of the urban localities, are not yet in the Dwelling and Building Register and therefore a sample is taken from lists of households or dwellings. A systematic random sample is taken near to the time of investigation from a list of households or dwellings obtained from the secretariats of the localities.
c. Sampling from lists of persons – it is usually difficult to obtain a list of households in kibbutzim. Therefore for those kibbutzim sampled in the survey, a list of persons aged 18 and over residing permanently in the kibbutz is obtained close to the time of the first interview. A systematic random sample of persons is chosen from this list. A sampled person who is a head of household (in accordance with definitions laid down in advance) is interviewed together with the other members of the family. A person who is sampled but is not a head of household is not included in the sample (unless one of the other sampled persons is the head of their household).

## Special Samples

A small part of the current sample is not drawn by the main sampling method described above, but instead by other methods, depending on the sampling frame and various other constraints.

4

a. Samples in student hostels and immigrant absorption centers – Neither persons nor households in student hostels and immigration absorption centers are covered by the Dwelling and Building Register. In order to include these populations in the current Labour Force Surveys, special sampling frames of dwelling units in student hostels (in the seven large universities) and immigrant absorption centers are compiled. A one-stage sample of dwelling units is taken from these frames once a year and is allocated evenly to the panels of the sample year.

b. New buildings – The investigation of the main sample of the Labour Force Surveys in urban localities may extend up to two and a half years from the time the sample was taken. Since the original sample of dwellings does not represent the population that moved into dwellings of which the construction was completed after the sampling, these dwellings have to be represented by a supplementary sample. Thus, each quarter, an additional sample is taken from special sampling frames of new dwellings in the urban localities for each panel whose investigation has not yet finished. In rural localities, no supplementary sample is taken since the first interview is held close to the time of taking the sample and the fourth interview is completed after about a year and a quarter after the sample was taken.

#### Changeover or Multiple Households in the Sample Unit

It should be mentioned that because the sample unit is a dwelling, the household residing there at the time of the interview is investigated. Thus, in the case of a changeover of residents, the new household is interviewed. The same principle applies when the sampling is from a list of households – the interviewer returns to the same address. In the case of more than one household in the sampled dwelling, all the households, including all persons aged 15 and over, are interviewed.

#### Allocation of the current sample over time

Because one of the main goals of the Labour Force Survey is to measure changes in the characteristics of the labour force over time, a number of steps are taken to minimize the variation in the sample over time.

Each year, localities are allocated to panels so that an optimal balance is achieved with regard to the sample size and characteristics of the localities in each panel. In very large localities, which are surveyed in every panel, each panel contains a uniform number of interview quotas (portions). Each panel is distributed over about one-fourth of the locality, in order to reduce the distances that interviewers have to cover between the dwellings in their interview portions. However, the eight panels surveyed each month are distributed evenly in all parts of the locality.

The interviewers' portions in the current sample are allocated among 12 panels, so that balanced samples were obtained with respect to the following:

- The number of portions in each panel.
- The number of portions according to locality groups (for example, kibbutzim, moshavim, Arab localities).

• The number of portions in localities where there are 12 portions a year or more.

Furthermore, the week of interviewing is designated within the month for each portion, so that a balanced sample will be obtained over the four weeks of the month.

## Size of the current monthly sample

In each month, there are about eight panels with about 1,500 dwellings each, so a total of about 12,000 dwellings are included each month. In these dwellings, between 9,000 and 9,500 households are expected to be interviewed.

## Permanent Samples from the 2008 Population Census

Because of the difficulty of interviewing certain sections of the survey population on a regular basis, "permanent" samples were taken from a sampling frame comprising records from the socioeconomic sample used in the 2008 Population Census. These samples participate in the survey estimates, by means of data collected in the Census, and do not change between censuses. The permanent samples are:

## Institutions not investigated currently in the survey

Other institutions besides the types of institutions mentioned in the section "special samples", such as dormitories at educational institutions and homes for the elderly, are not covered in the current samples of the survey. These institutions are included in the current estimates through socio-economic data collected in the 2008 Population Census. The census data are sample data. A total of about 23,500 persons aged 15 and over were included in the permanent sample of institutions in the Census, which represent about 175,000 persons aged 15 and over in the population.

## Persons living outside of localities in the south district

Households belonging to Bedouin tribes in the South are also covered in the socio-economic data of the 2008 Population Census. These data are also sample data, and include about 2,900 persons aged 15 and over who represent a population of about 11,000 households with about 22,500 persons aged 15 and over.

## The Interview and Questionnaire

Interviews were conducted by approximately 90 interviewers from the Central Bureau of Statistics (about 45 field interviewers, and about 45 telephone interviewers), who receive ongoing training and supervision. Each field interviewer receives a weekly quota of 8-9 dwellings to cover. Telephone interviewers use a general list of dwellings, which are divided according to the week of the interview without allocating interview quotas to each interviewer. In 1<sup>st</sup> quarter of 2018, interviews were conducted in 73.5% of the households that were intended to be investigated in the survey (compared with 77.4% in 4<sup>th</sup> quarter of 2017). The calculated percentage of interviewed households excluded cases that were not intended to be investigated, such as unoccupied dwellings, non-residential dwellings, and households that were not in the survey population. These

cases are considered "zero" cases, 6.6% of the gross sample in 1<sup>st</sup> quarter of 2018 (compared with 7.1% in the previous quarter) (see Table D).

In residential dwellings, the interviews were conducted with one of the adult household members, who provided information about all of the members of the household (in dwellings with more than one household, each household was investigated). For households where nobody was home on the first visit, interviewers usually make two subsequent visits. For each visit in which no household member is interviewed, the interviewer indicates the reason in a "non-investigation" questionnaire.

In addition to "zero" cases, non-investigation can be due to absence of household members, refusal to respond, or other reasons such as difficulty with communication or inability to locate the dwelling. Households that are not investigated for these reasons are considered "non-response" cases (26.5% of the net sample in 1<sup>st</sup> quarter of 2018, compared with 22.6% in the previous quarter).

The final reason for non-investigation (including reasons for "zero" cases) is determined according to data provided by the interviewers in the data collection process and is determined after data processing and editing. With regard to "zero" cases, the interviewers also rely on information obtained from neighbors of the household members. With regard to cases of non-investigation because of "non-response", the information is mainly obtained from the household members themselves.

Data are collected in face-to-face interviews, using the Computer Assisted Personal Interviewing (CAPI) method in Stage A. In the other stages, data were collected in telephone interviews using the Computer Assisted Telephone Interviewing (CATI) method. In 1<sup>st</sup> quarter of 2018, out of all the dwellings surveyed, 87.6% of the interviews were conducted by telephone (compared with 87.9% in the previous quarter).

For each dwelling, one questionnaire was completed with information pertaining to all the households and to each member aged 15 and over.

The questionnaire for individuals. In January 2018 the questionnaire for persons aged 15 and over was updated. The updated questionnaire includes questions on: work in the determinant week, number of jobs held by an employed person, number of work hours usually worked and hours actually worked in the determinant week, number of work hours less than usual and number of overtime hours in the determinant week, number of work hours usually worked and hours actually worked in the determinant week, number of work hours usually worked and hours actually worked in the determinant week at an employed person's main job (for those who have more than one job), whether an employed person is interested in working more hours than they usually work and whether they have they sought additional hours (for those who usually work less than 35 hours a week), reasons for part-time work, reasons for absence from work (during the entire determinant week or part of it), place of work, geographical mobility of all employed persons

7

and the length of time it takes employed persons to get to their place of work, industry and occupation, and status at work. Questions were added about mode of employment, type of employment contract, number of days a week usually worked and actually worked in the determinant week, and whether they worked on the previous weekend. For employed persons information was collected on the year the current job was begun and those who began working in the previous two years were asked about how they found their job and how long it took them to find their job. All employed persons were asked whether they were interested in changing jobs. If yes, they were asked their reasons, had they sought other work and how they sought other work. In addition, information is obtained on activities of unemployed persons such as seeking work, mode and length of time of search, search for full-time or part-time work, reasons for unemployment, whether the individual ever worked in Israel and when. For employed persons, the amount of time worked during the year and reasons for working only part of the year are also investigated. Those persons not in the labour force were asked if and when they worked in Israel and those who worked in the two years preceding the interview were asked about their most recent job (similarly to employed persons). Those persons not in the labour force and who had not worked in the previous two years were asked why they did not work. Information was also gathered on those discouraged from seeking work including reasons for not seeking work in the last month, length of time spent seeking work in the last year, whether they sought work through the Employment Bureau and whether they were seeking full-time or part-time work. Apart from details about work, demographic information is also collected: age, sex, marital status, country of birth, length of time in Israel, level of education (number of years of schooling, type of school last attended, and highest diploma received. Information on whether one studied in a Yeshiva, what type of Yeshiva, and number of years of study in a post-secondary Yeshiva is collected for Jewish men). Note that a response option "Pre-academic preparatory program" was added to the question on type of school last attended.

The household questionnaire includes information on the number of persons in the household, the number of rooms in the dwelling, the number of children in the household, number of hours of work of paid domestic help, ownership of the dwelling and who the dwelling is rented from, religious way of life of the people living in the dwelling, and people with disabilities living in the dwelling and types of disabilities.

## The Estimation Method

## General

In the monthly Labour Force Survey, it was decided to introduce an innovative estimation method. This method was proposed by Fuller and Rao (2001), and is known as Regression Composite Estimation. The estimator obtained through this method is referred to as a "composite estimator". The advantage of the new method over the method used in quarterly Labour Force surveys lies in the utilization of information from the previous month in the estimates of the current month. The estimator obtained through this method is usually more efficient. That is, the sampling error of composite estimators for a sample of the same size is usually lower than that of the estimators used in quarterly surveys for certain parameters that defined as meaningful.

## **Calibration of the Survey Estimates**

In composite estimates, data on the individuals and households surveyed in a given month are calibrated in terms of the total known population by cross-sections of a geographic area, sex, and age group (in the same way that calibration was done in the quarterly Labour Force Survey, see Table E). In addition, the data are calibrated on the basis of estimates of labour force data estimates from the previous month. That is, whereas the estimator used until now was calculated only on the basis of current information (at time "t") and did not utilize existing information from the past about the individuals interviewed in the survey, the composite estimator also uses relevant information from the past. For example, if an individual was employed in the previous month, there is a very good chance that the individual will continue to be employed in the current month. This estimation method has been used in labour force surveys in Canada and Australia. Besides the attempt to reduce the sampling error obtained in the monthly estimators, an attempt is also made to reduce the sampling errors of estimated changes between different periods for labour force parameters. In fact the new sampling method also allows for flexibility in the effectiveness that one seeks to attribute to estimates of change between two periods (e.g., month "t" versus month "t-1"), in comparison with the efficiency attributed to monthly estimators. In general, improvement in one estimator is usually at the expense of improvement in another estimator. To alleviate this problem, a new parameter has been defined, which controls the importance attributed to information based on changes from one month to another. The higher the parameter, the more emphasis is placed on improving the change estimates.

A review of the new method in the professional literature and in simulations conducted at the Central Bureau of Statistics indicates that composite estimators of levels and change are substantially more effective. Regarding the variables that were included in the calibration process, the improvement in the effectiveness of level estimates for unemployed persons ranged from 5% to 10%, and the improvement in the effectiveness of level estimates for employed persons was 20% and more. In addition, an improvement was found in the effectiveness of monthly change estimates. However, with regard to the variables that were not included in the calibration process,

10

when there was a correlation between those variables and the variables included in the calibration there was usually improvement; and when there was no correlation between the variables, the improvement was expected to be negligible or no improvement was expected at all.

#### **RELIABILITY OF THE ESTIMATES**

The data presented in this publication are estimates for the population as a whole although they are based on a sample survey. As such, they are prone to errors, which may be of two types:

#### 1. Sampling Errors

Sampling errors occur because only a sample of the population is investigated. The particular sample used in this survey is one of a large number of possible samples of the same size that could have been selected using the same sampling method. It is clear that estimates based on different samples will differ from one another, and almost all of them will differ from the value obtained had a complete census been taken – "the census value".

The **estimate** X' is the value, estimated from the specific sample of this survey, of the corresponding value X that would have been obtained had a complete census been conducted.

The **sampling error**  $\sigma(X')$  is a measure of the variability between the different values of the estimate that would have been obtained from all possible samples of the same size and derived by the same sampling method and the census value obtained under the same conditions of data collection.

In view of the variability of sample estimates, it may preferable to consider a range of values where the census value is likely to be found, with a given probability (or level of confidence) rather than to rely on the specific value of the estimate obtained from the sample. This can be done using the **sampling error**.

The **confidence interval** for an estimate is the range containing the census value X with a given level of confidence. Using both the estimate X' and its estimated sampling error  $\sigma'(X')$ , it is possible to construct a confidence interval, that contains the census value X with the given level of confidence.

Confidence intervals are usually given at a 95% level. These may be obtained as the range between  $X'-2\sigma'(X')$  and  $X'+2\sigma'(X')$ . It may be asserted with 95% confidence that the census value lies in this range. A higher or lower level of confidence may be calculated as follows:

α	67%	80%	90%	95%	99.5%
Κ(α)	1.0	1.3	1.7	2.0	2.8

Where  $K(\alpha)$  (the number of standard errors – plus and minus) is determined according to the required level of confidence  $\alpha$ .

Confidence intervals are generally symmetric around the estimate. However, for estimates based on a small number of cases in the sample (less than 40), confidence intervals are not symmetric. In such cases, both the estimate and its sampling error are subject to large errors.

It should be mentioned that it is sometimes more convenient to measure a sampling error in terms of the **relative sampling error**, defined as the sampling error divided by the estimated value.

#### 2. Non-Sampling Errors

Non-sampling errors may derive from many sources in the various stages of collecting and processing the survey data, and may occur equally in a full census.

The main non-sampling errors in this survey are:

a. **Non-response errors:** Errors caused by the fact that households are not investigated due to absence from home or refusal to participate. This may cause some bias in the estimates, since the characteristics of persons belonging to these households may differ from those of persons who were investigated.

b. **Response errors:** Errors that result from misunderstanding of the question, unwillingness or inability to answer correctly, or incorrect presentation of questions.

c. **Errors in processing:** Errors that occur in the stage of processing the material, such as errors in coding and in the data entry process of the questionnaires. Some of these errors are corrected by means of checks that the material undergoes.

d. Some of the households were interviewed in a week that was not the "**determinant week**". This also leads to bias in the estimates.

Whereas sampling errors can be estimated on the basis of the survey data, non-sampling errors are difficult or even impossible to estimate. It is important to note that in the stages of planning and conducting the survey, every effort was made to minimize these errors.

## DEFINITIONS, CLASSIFICATIONS AND EXPLANATIONS

#### A. Population and Labour Force

1. **Population** – the survey population is the permanent (de jure) population of Israel aged 15 and over.

The survey population *includes*:

- 1. Permanent residents living in Israel;
- 2. Permanent residents living abroad continuously for a period of one year or less;
- 3. New immigrants and potential immigrants, from the moment of their arrival in Israel;
- 4. Tourists, volunteers or temporary residents living in Israel continuously for more than a year;
- 5. As of 1968, residents of East Jerusalem;
- 6. As of 1972, the population of Israeli localities in the Golan Sub-District; as of 1982, all the residents in this sub-district;
- 7. From 1972 to 2005, the population of Israeli localities in the Judea and Samaria and Gaza Areas; as of 2006, not including the Gaza Area.

The survey population does not include:

- 1. Permanent residents living abroad continuously for more than a year;
- 2. Tourists, volunteers and temporary residents living in Israel continuously for a year or less;
- 3. Foreign diplomats and UN people.
- 2. **Population of households:** The tables refer to all households, with the exception of households in kibbutzim, institutions, student dormitories, and households of people living outside localities (Bedouins in the South). The tables relating to households by housing density do not include absorption centers and hotels populated by immigrants.
- **3.** Household: One person or a group of persons living together in one dwelling on a permanent basis most of the week, who have a common expense budget for food. A household may include persons who are not relatives.

#### A household includes:

a. All of the people belonging to the survey population and children under age 15 who usually sleep in the dwelling at least four nights a week.

## Of those who usually sleep in the dwelling less than four nights a week, household members include:

- b. A household member doing compulsory military service including the Nahal "Fighting Pioneer Youth" brigade and Shalat (unpaid service to the community in a military framework) – or serving in the permanent army, who has no other permanent civilian address in Israel.
- c. A married person living away from a dwelling that is the couple's permanent address due to work or studies, but whose spouse resides in the dwelling (not including couples living separately).

- d. Crew members of aircraft and ships whose permanent address is the abovementioned dwelling, where they sleep when they are in Israel.
- e. A family member residing in the sampled dwelling at the time of the interview, who has no other permanent address in Israel.
- f. A former household member who moved to a senior citizens' home one month or less before the interview.
- g. A household member who has been staying in a hospital for one month or less.
- h. A household member who has been staying abroad continuously for one year or less.
- i. An unmarried household member who has been away from the dwelling for less than a month due to vacation, work, or a short-term course, and who has no other permanent address in Israel.
- j. A household member studying at a civilian or military boarding school, as well as persons living in student dormitories who were at their parents' home at the time of the interview if the interview was conducted during the summer vacation.
- k. A household member who is in prison (including an institution or work farm), or who has been living at an institution for people with disabilities (those who are blind, deaf, or with retardation) for one month or less.

#### A household does not include:

- a. A married spouse who has left the dwelling and does not intend to return (i.e., a spouse living separately, even if not yet divorced).
- b. A married person living at an address other than that of the family (the spouse and children) due to work or studies, even if that person sleeps at this address most of the week.
- c. A household member enrolled at a boarding school, as well as a person living in student dormitories if the interview was conducted during the school year.
- d. A family member staying on a kibbutz while serving in the Nahal ("Fighting Pioneer Youth" brigade) or engaging in volunteer service in a pre-military framework.
- e. A family member who is staying in the sampled dwelling temporarily, but who lives in another dwelling most of the year which serves as their permanent address.
- f. A family member who moved to a senior citizens' home over a month prior to the interview.
- g. An unmarried family member who has been away from the dwelling, and who sleeps at a different (civilian) address in the country most days of the week.
- h. A family member who has been hospitalized for more than a month.
- i. A family member who is in prison (including an institution or work farm), or who has been living at an institution for people with disabilities (for those who are blind, deaf, or with retardation) for more than one month.
- **4. Size of household:** Determined by the number of persons in the household according to the above definition.

- 5. The determinant week is the week ending on the Saturday preceding the survey interview.
- 6. Characteristics of the weekly labour force

**6.1 Weekly labour force**: Persons aged 15 and over who were "employed" or "unemployed" during the determinant week, according to the definitions given below.

**6.1.1 Employed persons**: Those who worked (in Israel or abroad by an Israeli institution or company) for at least one hour during the determinant week at any type of work for pay, profit or other remuneration: all workers in kibbutzim (whether in services or other industries); family members who worked without pay in a family business for 15 hours or more during the determinant week; persons staying in institutions who worked for 15 hours or more during that week; persons serving in the army (compulsory military service or permanent army); persons temporarily absent from their work.

Employed persons are divided into three sub-groups:

- a. *Full-time workers*: Persons who worked 35 hours or more during the determinant week.
- b. *Part-time workers*: Persons who worked 1–34 hours during the determinant week.
- c. **Temporarily absent from work**: This group includes all those who were temporarily absent from their regular work throughout the determinant week, due to illness, vacation, army reserve duty, decline in the extent of work, labour dispute, temporary work stoppage (up to 30 days), or other reasons. The group does not include persons who were absent for only part of the determinant week.

Those who were temporarily absent from work are included in this group only if they had a formal affiliation to a workplace, i.e., if they are ensured of work with the same employer after the period of absence.

Those who were absent from work for over a year are not included in this group.

<u>Note</u>: The usual extent of employment – full or partial – is determined by the workers' usual number of work hours (not in the determinant week).

**6.1.2 Unemployed persons**: Persons who did not work at all during the determinant week (even for one hour) and who actively sought work during the four weeks preceding the interview by registering with the Labour Exchanges of the Employment Service or by application to employers in person or in writing, or in any of the other ways mentioned below, and who would have been available to start work in the determinant week had suitable work been offered ("availability to work"), including those who were promised employment within 30 days.

<u>Note</u>: A person who was not available to work during the determinant week due to illness or reserve army duty is considered unemployed.

Unemployed persons are divided into two sub-groups:

- a. Those who worked in Israel or abroad for an Israeli institution or company during the 12 months preceding the survey interview.
- b. Those who did not work in Israel or abroad for an Israeli institution or company during the 12 months preceding the survey interview.

#### Ways of actively seeking work:

- Labour Exchange of the Employment Service

- Employment agencies as well as other labour exchanges
- Advertisements in newspapers, on the Internet, etc.
- Personal or written application to employer
- Friends or relatives
- Attempt to establish a business
- Sought work in other way

<u>Note</u>: Since unemployed persons may seek employment in more than one way, they are asked about each of the above possibilities.

- **6.2** Not in the weekly labour force: All persons aged 15 and over who were neither "employed" nor "unemployed" during the determinant week. This group includes: students who did not work for even one hour during the determinant week; persons employed in voluntary work who received no compensation; or abroad for a non-Israeli institution or company; persons who cared for the children, family members, or the household and did not work for even one hour outside of the home; persons unable to work, and persons living on a pension or other allowance who did not work for even one hour during the determinant week. Also included in this group are family members who worked without pay in a family business for less than 15 hours during the determinant week, and persons in institutions who worked less than 15 hours a week.
- **6.2.1 Discouraged workers**: All persons aged 15 and over who were not in the weekly labour force but were interested in working, and could have started to work during the determinant week had they been offered suitable work ("availability to work") and sought work during the 12 months preceding the survey but not over the four weeks preceding the survey for the following reasons: they believed there are no appropriate jobs for them in their field or in their area of residence in terms of wages, work hours, or interesting work; lack of appropriate experience or training; language difficulties or inappropriate age (too young or too old).

#### 7. Characteristics of the Annual Labour Force

- **7.1 Annual labour force:** All persons aged 15 and over who were in the weekly labour force, as well as those who worked in Israel or worked for an Israeli institution or company abroad during the year but were not in the weekly labour force.
- **7.2 Employed during the year:** All persons aged 15 and over who worked in Israel or abroad for an Israeli institution or company for **at least one day** during the 12 months preceding the interview. People who worked less than one month are considered as those who worked for one month.
- **7.3 Not in the annual labour force:** Not in the weekly labour force, and did not work at all in Israel, or who worked abroad for a non-Israeli institution or company during the 12 months preceding the interview.
- 8. Working age: Men aged 15–66

Women aged 15-61

Until 2008: Men aged 15–64; women aged 15–59

Household with persons of working age: A household with at least one person of working age.

Household with persons not of working age: A household with persons not of working age only.

**9.** Children in household: Includes all children up to age 17 (inclusive) in the household. Does not include those aged 15–17 who have a spouse or partner and who have children of their own in the household.

<u>Note</u>: in the Labour Force Surveys of 1998–2001, according to the weighting method that was used in the survey, Israeli-born children of immigrants who arrived in Israel in 1990 and after were included in the weighting strata as "non-immigrants". Therefore the estimate obtained for immigrant children was lower than their actual number. As of 2001, processing was conducted in new weighting groups.<sup>1</sup>

- **10.** Number of rooms in dwelling: All rooms used by the household as living quarters. The following are excluded: kitchens, bathrooms, toilets, balconies, and rooms used for business or work only, as well as rooms rented to tenants. Until 1979, half a room was counted as a room; since 1980, a full record has been made of rooms and half-rooms. Therefore, data for 1980 were processed twice.
- **11.** Number of persons per room (housing density): Calculated by dividing the total number of persons living in the household by the total number of rooms occupied by members of the household.
- **12.** Average number of persons per household: Calculated by dividing the total number of persons in all households by the number of households.
- **13.** Religion and population group: The first person in the list of household members in the questionnaire is the only household member who is asked about religion. The religion of the first person in the list is registered as the religion of all household members who have an Israeli identity card. Household members who do not have an Israeli identity card are asked about their religion. The classification according to religion includes: Jews, Moslems, Christians, Druze and other religions (other religions also include no religion or religion unknown). The classification according to population group includes: Jews, Arabs, and Others.

<sup>&</sup>lt;sup>1</sup> See: Central Bureau of Statistics (2003). *Labour Force Surveys 2002, Current Statistics 9/2003.* Jerusalem: Author.

Until 2001 there were two population groups: "Jews" and "Other Religions." The group "Other Religions" included all those who replied that they are not Jews. Until the beginning of the 1990s, "Other Religions" mainly included Arabs. Following the wave of immigration in the 1990s, "Others" was added to this group (see below). As of 2002, the group "Other Religions" was divided into two population groups:

- Arabs: a. Live in non-Jewish localities; or
  - b. Live in Jewish or mixed localities, were born in Israel or arrived in Israel before 1990.
- Others: Live in Jewish or mixed localities, and arrived in Israel in 1990 or after.
- **14. Years of schooling**: The number of years spent **in regular studies in school**, excluding studying on one's own or attending irregular courses. Only completed years of schooling are considered. If a person was studying at the time of the interview, that year is also counted.
- **15.** Type of school last attended: The type of school last attended by the participant, even without completing studies there.
- **16. Highest diploma (degree) received**: The highest diploma that a person received from a school or from educational settings that grant official diplomas (not including certificates for completion of courses, certificates for completion of in-service training, etc.).
- **17. Head of household:** In the tables of the Labour Force Surveys, the head of household is the economic head of household, i.e., the main wage earner of the household.

As of 1995, the definition of head of household was changed, and is now determined by extent of participation in the labour force and extent of employment, irrespective of age, sex, or income.

The head of household is the employed person who usually works 35 hours or more a week (first preference), an employed person who works up to 34 hours a week (second preference); an unemployed person (last preference).

If more than one person in the household fits the definition of head of household, or if no household member fits the definition, the head of household is determined by the interviewee.

Notes:

- The head of household is a person aged 18 and over (except households where the only wage earner is aged 15–17, and households with persons aged 15–17 only).
- A caregiver living in the dwelling will not be defined as the head of the household, except in households with one person.
- **18.** Number of children, by age group: Information is obtained on the number of children of each female in the household and the total number of children in the household, by the children's ages.
- **19.** Work hours per week: The number of hours that employed persons actually worked during the determinant week, including: overtime in the same workplace or in other workplaces, preparation hours (for teachers and artists), and waiting hours (e.g., for drivers or porters), as well as work hours of a non-paid family member in the family business or farm (if the person worked 15 hours or more that week).

Average work hours per week is obtained by dividing the total number of weekly work hours of all employed persons by the number of employed persons. This average is calculated both for all employed persons (including those temporarily absent from work) and for employed persons, excluding those temporarily absent from work.

- **20.** Type of locality: The data by type of locality are presented for the year of the survey on the basis of population estimates of localities as per the previous year. Localities are divided into two main groups, which are distinguished according to the size of the locality (number of residents):
  - a. **Urban localities**, in which there are 2,000 or more residents. These localities are classified into sub-groups by size;
  - b. **Rural localities**, in which there are less than 2,000 residents, which are classified into three types of localities:
    - 1. Kibbutzim;
    - 2. Moshavim and collective moshavim;
    - 3. Other rural localities.<sup>2</sup>
- **21. Development localities:** Included are the localities specified in the regularly updated regulations based on the "1963 Severance Pay Law."

The 25 localities that are included in the Labour Force Survey data are listed below:

**Development localities in the North**: Afula, Akko, Bet She'an, Hazor HaGelilit, Karmi'el, Ma'alot-Tarshiha, Migdal HaEmeq, Nazerat Illit, Qiryat Shemona, Shelomi, Tiberias, Yoqne'am Illit, Zefat.

**Development localities in the South**: Arad, Bet Shemesh, Dimona, Elat, Mizpe Ramon, Netivot, Ofaqim, Qiryat Gat, Qiryat Mal'akhi, Sederot, Yavne, Yeroham.

**22. District and sub-district**: The districts and sub-districts are defined according to the official administrative distribution of the country, according to which there are 6 districts and 15 sub-districts.

Includes Israeli localities in the Judea and Samaria Area.

In 1972, the Judea and Samaria and Gaza Areas were added, in order to characterize the Israeli localities and their population, found in these areas. The data for 2005 relate to the residents of the Judea and Samaria Area, and do not reflect changes in the population following the evacuation of the Israeli localities in the Gaza Area and northern Samaria, under the Disengagement Plan Law 2005.

As of 2006, as indicated in section 1, only the Judea and Samaria Area is included.

**23.** District and sub-district of work: Employed persons were classified according to the locality in which they worked. Employed persons working in the Judea and Samaria Area were classified as a separate group.

#### 24. Metropolitan areas

 <sup>&</sup>lt;sup>2</sup> For further details, see: Central Bureau of Statistics (2014). *Statistical Abstract of Israel 2014*, No. 65. Jerusalem: Author, Introduction – Chapter 2.

A metropolitan area is a large number of urban localities (municipalities and local councils) and rural localities in regional councils, which are adjacent to one another and constitute one functional entity that integrates economic, social, and cultural relations.

The metropolitan areas were divided according to their internal structure:

*Core*: The territory of the primary city serving as the focus of activity for the population of the metropolitan area.

*Inner Ring*: The area containing the localities surrounding the Core.

*Middle Ring* (in the Tel Aviv and Be'er Sheva Metropolitan Areas): The area containing the localities surrounding the Inner Ring.

*Outer Ring*: The area containing the localities surrounding the Middle Ring.

Sections (Northern, Eastern, Southern, Western): Sub-divisions of the metropolitan rings.

As of 1999, the labour force survey has used a new definition of metropolitan area, which replaced the former definition of conurbation. Two metropolitan areas were defined: The Tel Aviv Metropolitan Area, and the Haifa Metropolitan Area.

In 2001, the borders of the metropolitan areas were re-examined and, as a result, the borders of the Haifa Metropolitan Area were changed. **The changes in the Haifa Metropolitan Area** were made in the localities included in its outer ring: In the south the locality of Jisr Az-Zarqa was removed, and in the north it was decided to include all localities up to the Nahariyya line (inclusive). In the North-East of the outer ring, it was decided to include all localities in the Karmiel natural area and, in addition, the localities of the Misgav Regional Council. The borders of the **Tel Aviv Metropolitan Area** were not changed.

**Be'er Sheva Metropolitan Area:** In 2001, a plan was approved that defines the borders of a metropolitan area in the South which is developing around the city of Be'er Sheva. The Be'er Sheva Metropolitan plan is similar to the contours of the other metropolitan areas, in that it is also divided into rings with sections in them. The rings are defined by their distance from the centre of the metropolitan area (the "core"), which is the city of Be'er Sheva. The borders of the Be'er Sheva Metropolitan Area include the Northern Negev: from the border of the Be'er Sheva Sub-District in the north, up to Mitzpeh Ramon in the south; and from the border of the Gaza Strip and Egypt in the west, up to the Dead Sea and the Jordanian border in the east.

In 2013, the Central Bureau of Statistics, in accordance with a recommendation by the Municipal Statistics and Geographic Classifications Committee, decided to update the borders of the existing metropolitan areas (Tel Aviv, Haifa, and Be'er Sheva) and to define a fourth metropolitan area: the Jerusalem Metropolitan Area. Data for 2012 by metropolitan area (Tables 1.31, 2.41, and 2.42 in the *publication Labour Force Surveys 2013*) were recalculated to enable data comparisons.

**Tel Aviv Metropolitan Area:** In the outer ring, a new section was defined for the Israeli localities in the Judea and Samaria Area. In accordance with the recommendations of the Committee, this addition was marked as points only, rather than as contiguous territory between localities.

Haifa Metropolitan Area: Addition of a small number of localities, and the removal of many other localities, from the metropolitan area.

**Be'er Sheva Metropolitan Area:** Definition of one outer ring only (compared to the previous division in which an inner ring, a middle ring, and an outer ring were defined). The new division greatly minimized the number of localities included in the Metropolitan Area.

Jerusalem Metropolitan Area: The fourth metropolitan area, which was added in 2013, consists of a core (the city of Jerusalem) and an outer ring. The outer ring consists of two sections: Eastern and Western. The Eastern Section includes the Israeli localities in the Judea and Samaria Area that are within the Metropolitan Area, which are marked as points, rather than as contiguous territory between localities.

## 25. Commuting to work:

a. Commuter: A person employed outside of his/her locality of residence.

There are four levels of commuting to work:

- Employed in the sub-district of residence;
- Employed outside of the sub-district of residence but within the district of residence;
- Employed outside of the district of residence, in one locality;
- Employed outside of the district of residence, in two or more localities.
- b. **Non-commuter:** A person employed in his/her locality of residence.
- **26.** Vacant dwelling: A dwelling that is not occupied permanently for various reasons, such as: construction or renovations are being carried out; the dwelling is new or renovated and has not yet been occupied; the dwelling is demolished, sealed, or abandoned; the tenant passed away or moved to an institution; the dwelling is a holiday dwelling; the dwelling is only used occasionally.

**27.** Religious lifestyle of persons residing in the dwelling: A representative of the household provides information regarding the religious lifestyle of all the persons residing in the dwelling. The response options are: secular, traditional, religious, very religious, ultrareligious (for Jewish households only), and mixed household (in households with more than one person, and there is more than one religious lifestyle).

**28. Ownership of dwelling:** The persons living in the dwelling are asked whether the dwelling they live in is:

- 1. Own dwelling
- 2. Rented dwelling
- 3. Assisted living
- 4. Rent-free dwelling owned by others (including relatives)
- 5. Key money.

Those who answer that the dwelling is rented are asked from whom it is rented.

## B. Classification by Status at Work, Industry, Occupation

Employed persons (including those temporarily absent from work) are classified by their status at work, industry and occupation, according to their main work during the determinant week. For unemployed persons and persons not participating in the labour force who worked in Israel or worked abroad for an Israeli institution or company during the 12 months preceding the survey, the data relate to their last work.

**1. Status at work**: Since 1995, status at work is based on the classification of the International Labour Organization 1993.<sup>3</sup>

*Employees*: Persons working for another party in return for daily wages, monthly salary, piece work or work for any other kind of remuneration. Self-employed persons who are registered as a company and receive their wages from that company are classified as employees.

**Recipients of wages from employment agencies or employment contractors**: Employees placed in jobs and receiving their wages from the employment agency or employment contractor, even though the workplace in which they were placed is responsible for implementation of the work.

The following are not included in this definition:

- Employees on the staff of the employment agency;
- Employees hired through a subcontractor, because in these cases, the subcontractor bears responsibility for the implementation and quality of the work. These employees work mainly in the following industries (according to the 2011 Classifications): Security activities (Class 8010), Combined facilities support activities (Group 811), Cleaning activities (Group 812), and Home-care services (Group 882).

*Employers*: Persons employing other persons for payment or any other remuneration, or business partners employing others, including a farm owner employing workers for wages.

*Self-employed*: Persons working in their own business or farm, who do not employ others in return for wages or any other remuneration.

*Members of cooperatives*: Persons who, in addition to their salary, share in the profits of cooperatives or cooperative societies, including members of collective *moshavim*.

*Members of kibbutzim*: Persons living on kibbutzim and working there **without pay**, including candidates for membership, relatives of members who reside permanently in the kibbutz, and training groups. The classification does not include "volunteers", i.e., people who are not kibbutz members but live and work there for wages or other remuneration. Kibbutz members who work for pay outside the kibbutz are classified as employees.

<sup>&</sup>lt;sup>3</sup> International Labour Organization (1993, January). Resolution Concerning the International Classification of Status in Employment: ICSE-93. Adopted by the Fifteenth International Conference of Labour Statisticians, Geneva. Retrived from: www.ilo.org/global/statistics-and-databased/standards-and-guidelines/resolutions-adopted-byinternational-conferences-of-labour-statisticians/WCMS 087562/lang—en/index.htm

**Unpaid family members**: Family members or other relatives working in the family business 15 hours or more during the determinant week without any kind of remuneration. A family member receiving wages is considered an employee.

**2. Industry:** Industry is determined by the nature of the establishment or institution (the "classification unit") where the person is employed. The industry is determined by the economic activity of the classification unit.

If an establishment covers more than one industry and the various activities can be separated according to "classification units" (e.g. a textile business that engages in spinning, weaving and sewing, or an institution such as a municipality), the industry is determined by the type of activity of the unit in which the employed person works.

A subsidiary unit that only serves the needs of the establishment and does not have an accounts department of its own is not considered a separate classification unit.

If the establishment is engages in several types of economic activities that cannot be separated according to departments, the industry of the establishment is determined by its main economic activity.

Persons employed in kibbutzim were classified according to the industry of their activity.

From 1995 to 2012, employed persons were classified according to the 1993 classification of industries,<sup>4</sup> which is based on the United Nations International Standard Classification 1990.<sup>5</sup>

Following the transition to the second edition of the 1993 classification of industries,<sup>6</sup> it was found necessary to adjust some coding rules, primarily in the case of establishments engaging in more than one activity. As a result, the industries were recoded.<sup>7</sup>

Since 2013, employed persons have been classified according to the 2011 classification of industries,<sup>8</sup> which is based on the United Nations International Standard Classification 2008.<sup>9</sup>

**High technology industries:** The definition of high technology industries is based on the Standard Industrial Classification of All Economic Activities 2011,<sup>8</sup> as well as on the

<sup>&</sup>lt;sup>4</sup> Central Bureau of Statistics (1993). *Standard Industrial Classification of All Economic Activities* 1993. Technical Publication No. 63. Jerusalem: Author.

<sup>&</sup>lt;sup>8</sup> Central Bureau of Statistics (2012). *Standard Industrial Classification of All Economic Activities 2011* (updated edition). Technical Publication No. 80. Jerusalem: Author.

<sup>&</sup>lt;sup>9</sup> United Nations (2008). *International Standard Industrial Classification of All Economic Activities*. Statistical Papers Series M No. 4, Rev. 4. New York, NY: Author.

definitions of OECD and Eurostat.<sup>10</sup> Until 2012, the definition of high technology industries was based on the 1993 classification.

The following are defined as high technology industries in Israel according to the 1993 Standard Industrial Classification:

Code	Name of Industry
	Manufacturing in the High-Tech Sector (High-Tech Industry)
245	Manufacture of pharmaceutical products for human and veterinary uses
30	Manufacture of office and accounting machinery and computers
32	Manufacture of electronic components
33	Manufacture of electronic communication equipment
34	Manufacture of industrial equipment for control and supervision, medical and scientific equipment
355	Manufacture of aircraft
S	ervices in the High-Tech Sector (Knowledge-Intensive High-Tech Services)
66	Telecommunications
72	Computer and related services
730	Research and development in natural sciences

Industries defined as high technology industries according to the 2011 Standard Classification:

Code	Name of Industry
	Manufacturing in the High Tech Sector (Manufacturing)
21	Manufacture of pharmaceutical products and homeopathic pharmaceutical preparations
26	Manufacture of computer, electronic and optical products
303	Manufacture of air and spacecraft and related machinery
	Services in the High-Tech Sector (Knowledge Intensive High-Tech Services)
61	Telecommunications
62	Computer programming, consultancy and related activities
631	Data processing, hosting and related activities, web portals
720	Research and development centres
721	Research and development in engineering and natural sciences

<sup>&</sup>lt;sup>10</sup> See "Recommendations of the Subcommittee for Official Classification of High Technology Industries in Israel – Definition of High Technology Industries." www.cbs.gov.il/publications/hitech/hi class heb.pdf

**3. Occupation:** Activities carried out by the employed person at the workplace, regardless of any trade that the person learned, if the person does not practice it.

From 1995 to 2012, interviewed persons were classified according to the 1994 classification of occupations,<sup>11</sup> which is based on the classification of the International Labour Office (ILO) 1988.<sup>12</sup>

As of 2013, employed persons are classified according to the Classification of Occupations 2011,<sup>13</sup> which is based on the International Standard Classification of the ILO 2008.<sup>14</sup>

#### C. International Comparisons

Chapter 11 of the Tables in *Labour Force Surveys 2014* presents comparative data on participants in the labour force, unemployed persons, employment rate (the percentage of employed persons out of the total population), and on persons employed in the high-technology industries.

The data for Tables 11.1, 11.2, and 11.3 in *Labour Force Surveys 2014* were obtained from the database of the International Labour Organization (ILO).

Owing to minor differences in the survey populations examined in different countries, the comparisons are not exact. The differences derive from two main sources: inclusion or exclusion of persons serving in the army (compulsory and permanent) in the labour force; and age boundaries (e.g., in Israel, the survey population consisted of persons aged 15 and over, and in the US it consisted of persons aged 16 and over). The tables include precise notes relating to the population covered in each country, as indicated in the ILO publication.

The definition of unemployed persons conforms to ILO definitions. The estimates are adjusted using a method based on a common and precise definition of unemployed persons. Once a year, member countries supply data based on identical questions that appear in labour force survey questionnaires. As of 1995, the definitions in Israel conform to those of the ILO.

The data for Table 11.4 in *Labour Force Surveys 2014* were taken from the EuroStat database.

## D. Job Vacancies and Supply and Demand in the Labour Market (based on the Job Vacancy Survey<sup>15</sup> and Labour Force Surveys)

### 1. Job vacancies.

**Job vacancy:** A job that is unoccupied, including a job that is newly created. Also includes a currently occupied job that is about to become vacant following retirement, resignation or promotion of the worker currently occupying the position, which is open to candidates outside the organization, and for which the employer is taking active steps to find a suitable candidate (through want ads, through employment agencies, or through direct recruitment).

## Includes:

- A full-time or part-time job;
- A temporary job, for which the person occupying the position is intended to temporarily replace the current worker due to absence (e.g., maternity leave, prolonged illness);
- A job for workers hired through employment agencies.

## Does not include:

- A job that has remained vacant due to the temporary absence of the current worker, until that person returns to work.
- A vacant job that is open only to internal candidates from the organization.
- A job that is unpaid, without profit, or without any other compensation (volunteer work).
- A job vacancy for subcontractors or consultants.
- A job vacancy abroad.

Workers hired through employment agencies are reported by their place of work and not by the employment agency.

Senior staff members of the employment agency are reported by the agency (their actual place of work).

Workers employed by a subcontractor are reported by the subcontractor and not by their actual place of work.

**Permanent job:** A job that is not seasonal or temporary, and that is not expected to be eliminated within the next six months.

Full-time job: As determined in accordance with the company's job definition.

**Job vacancy rate:** The ratio of total jobs in the economy to the overall volume of employment in the economy, that is, the number of job vacancies divided by the total number of occupied employee jobs plus the number of job vacancies.

**Survey population:** The survey includes a sample of businesses that represent most of the industries in the economy. The size range of the businesses varies, from small businesses (with 5+ employee jobs) to leading companies in the economy.

<sup>&</sup>lt;sup>15</sup> Central Bureau of Statistics (2013). *Statistical Abstract of Israel 2014*. No. 65 (Introduction to Chapter 12). Jerusalem: Author.

The division into industries is determined in accordance with the *Standard Industrial Classification of All Economic Activities 2011*. The industry refers to the industry that the business belongs to. If the business engages in several economic activities, the industrial classification is determined according to the main activity defined by the employer.

Units **not belonging** to the survey population are as follows:

- Small businesses that consistently employ less than five employee jobs;
- Agriculture, forestry and fishing (Section A);
- Local, public and defence administration, and social security (Section O);
- Governmental agencies that do not belong to Section O;
- The government sector (financial corporations for the development of local authorities, etc.);
- Working of diamonds (Division 34);
- Education (Section P): Pre-primary education Institutions (kindergartens) Group 850; Primary education institutions and secondary education institutions (lower and upper secondary education) – Groups 851 and 852. The survey did include tertiary - type B and higher education institutions (academic institutions);
- Child day-care activities (Class 8891);
- Activities of households as employers; undifferentiated goods- and serviceproducing activities of households for own use (Section T);
- Activities of extraterritorial organizations and bodies (Section U).

In addition, the occupation "professional workers in agriculture, forestry and fishing" (Category 6 in the *Standard Classification of Occupations*) was not included.

## 2. Supply and demand in the labour market

Labour demand: The number of job vacancies.

**Labour supply** (according to the Labour Force Survey): Employees (including members of cooperatives) who worked in the last 12 months and sought work. Including: those who work part-time involuntarily (sought full-time work or additional work and did not find), unemployed persons, and those not in the labour force who sought work.

**Supply to demand ratio**: The ratio of employees (including members of cooperatives) who worked in the last 12 months and sought work, to the number of job vacancies.

It is important to note that:

- The labour supply by occupations is underestimated. Among the population of employees who are looking for work (labour supply), those with a known occupation accounted for approximately 65% of total supply in 2014. That estimate does not cover the following: Persons who worked in the past (before the last 12 months) or did not work in Israel at all (immigrants, housewives, students who recently finished school, etc.) and sought work; and. employed persons who usually work in a full-time job and sought other work.
- The annual data are presented for occupations in which there were 5,000 employed persons and over (in the last year) according to the Labour Force Survey estimates, and for which the vacancies constituted at least 5% out of all job vacancies at the level of Major Group (one digit according to the *Standard Classification of Occupations*) in the last year presented in the table according to the Job Vacancy Survey.
- In uncommon occupations (less than 500 job vacancies), there may be fluctuations over time, which will affect the supply to demand ratio.
- The data published in Tables 5.8–5.10 in *Labour Force Surveys 2014* cover over 95% of all job vacancies in most major groups.

## **CHANGES IN THE LABOUR FORCE SURVEY 2012**

#### General

In January 2012, the Central Bureau of Statistics (CBS) completed a transition from a quarterly system of measuring labour force characteristics to a new and improved monthly system, in accordance with the latest international recommendations on employment and unemployment. In addition, labour force characteristics were updated from characteristics of the civilian labour force to characteristics of the total labour force. The main changes were: adjusting the definition of the population, significantly increasing the monthly samples, expansion of the geographic distribution, and use of more advanced statistical methods in sampling, in the interviewing model and in estimation of the data (see Table 4/a below). These changes, which are based on statistical considerations, led to logistical and operational changes, such as improved technological systems, expansion of the work teams, changes in interview methodology, work procedures, and more.

Subject	Quarterly Survey	Monthly Survey
Definitions of labour force characteristics	Characteristics of the <u>civilian</u> labour force	Characteristics of the <u>total</u> labour force (including those in military service – compulsory service or permanent army)
Mode of investigation	Each dwelling was investigated four times: two consecutive quarters, a break of two quarters, and two more consecutive quarters	Each dwelling is investigated eight times. Four consecutive months, a break of eight months, and four more consecutive months
Current sample size	Approximately 22,500 persons <u>a</u> <u>quarter</u> on an ongoing basis	Approximately 21,500 persons <u>a month</u> on an ongoing basis
"Permanent" samples	Sub-sample of approximately 3,900 persons from the sample census file (socio-economic data) of the 1995 Population and Housing Census	Approximately 26,000 persons from the sample census file (socio-economic data) of the 2008 Population Census
Main sampling frame	Municipal tax files	Dwellings and Buildings Register, after geocoding of dwellings to statistical areas
Use of spatial infor- mation for drawing the main dwelling sample	Files sorted by geographical information from the municipal tax files	Integration of the statistical area obtained from geocoding of dwellings, with the geographical information in the municipal tax files
Number of sample localities	Approximately 370 localities a quarter	Approximately 470 localities a month
Investigation period per sampling unit	The determinant week and three more weeks	The determinant week and one more week
The estimation method	No use of information on labour force characteristics from previous stages of the survey	Using a <b>composite estimator</b> based, among other things, on information about labour force characteristics from a previous stage of the survey. Changing the weighting strata (such as eliminating a separate weighting stratum for immigrants)

Table 4/a.- Main Changes in the Monthly Survey Compared with the Quarterly Survey

The transition to the new system led to a "break in the series". As a result, extreme care must be taken in comparison of past and present data. With the transition to the monthly survey, there were changes in the indices of participants in the labour force, employed persons, and unemployed persons in comparison with the past. For the most part, the break in the series could be attributed to the above-mentioned reasons. That is, the changes were the result of a revolutionary change in measurement, and not the result of economic developments in Israel at that time.

Notwithstanding the revolutionary change in measurement, the trend revealed in the monthly survey remained the same as the trend revealed in the previous quarterly survey. Strange as it may seem, from a statistical point of view it is possible that there is no difference between the numbers of the past and the present numbers. Sampling errors deriving from the use of different samples to measure the same phenomenon at the same time of the calendar year can cause the official numbers to move up or down by approximately 0.5%. Additionally, there are many different psychological influences related to the work methods of the survey, both from the perspective of the interviewers and from the perspective of the respondents. This highlights the importance of examining trends over time in official statistics, because it is necessary to exercise extreme caution in using absolute data and the rates derived from those data.

To enable cautious comparison for the purpose of continuous trend analyses, special coefficients were calculated (see "Chaining Coefficients between the Quarterly and Monthly Labour Force Survey Data" below). The coefficients were calculated on the basis of the 4<sup>th</sup> quarter of 2011, when two full surveys (quarterly and monthly) were conducted simultaneously. However, it is important to bear in mind that the use of chaining coefficients for other periods is based on the assumption that the behavior of persons in the labour force during those periods was similar to their behavior in the 4<sup>th</sup> quarter of 2011.

It should be noted that the new data do not detract from the validity, reliability, or quality of the quarterly data obtained in the past, which were based on the best methods available at the time. Both the current and past data are official data for the State of Israel.

#### Reasons for the Transition from a Quarterly to a Monthly Labour Force Survey

The quarterly survey is a survey in which the countrywide coverage of the sample is completed every quarter, whereas the sample coverage in the monthly survey is completed every month. Until December 2011, the CBS published monthly data from the quarterly survey. This method did not provide a basis for ascertaining whether changes in the monthly data during a quarter occurred because the sample coverage was partial, or whether there was a real change in employment and unemployment rates. The decision to change the survey was made in order to improve the data that are published, and in order to provide a better database for decision-makers and other users. A monthly survey requires a larger

sample (about three times larger) and covers more localities. As such, it appears that the results of the monthly survey provide a better reflection of the situation of the market than the results of the quarterly survey.

Another factor that led to the decision to update the Labour Survey was Convention 160 of the International Labour Organization (ILO) from the mid-1980s,<sup>1</sup> which deals with the process of reporting labour market statistics data. In the Convention, it was recommended that statistics bureaus change the method of measurement and adopt the approach of measuring the total labour force. On 23 December 2009, Israel ratified this Convention.<sup>2</sup> Concomitantly, Israel began the process of joining the OECD. As a result of that process, work procedures were examined by international experts. These experts, together with experts from various organizations in Israel who advise on official statistics, recommended that the CBS adopt the approach of **measuring the total labour force** and recommended the transition to the monthly labour force survey instead of the quarterly labour force survey that had been conducted until that time. The processes of planning, methodological development, and adaptation of computer systems took about six years. The process of transition to the monthly survey took place with the ongoing advice and supervision of the Public Council for Statistics, and the method was presented to experts and representatives of the public. In April 2011, the CBS began the transition process, which took about six months, and in the last quarter of 2011 the two surveys were conducted concurrently.

## Differences between the Monthly and Quarterly Surveys

- 1. **Differences relating to the sample:** The planning of the survey sample (including the rotation method); sample size; geographic distribution of the sample; distribution of the sample within the localities; the use of additional variables in the sampling process; changing of the permanent samples in the survey (institutions and those living outside of localities), etc.
- 2. Differences relating to the data collection process: Data collection in face-toface interviews versus phone interviews; increase in the number of interviewers; change in the profile of the interviewers; logistical changes, including a change in the structure of the unit dealing with data collection; addition of new modules for computerized management of the survey; reducing the investigation period in questionnaires; changes in the interview quota for interviewers; changes in the method of questioning about the respondents' workplace and profession in repeated interviews; imputations from previous stages of interviewing for demographic data, data on education, etc.

<sup>&</sup>lt;sup>1</sup> International Labour Organization (1985, June). Labour Statistics Convention 1985 (No. 160). Adopted by the Seventy-first ILC session Geneva. Retrieved from: www.ilo.org/dyn/normlex/en/f?p=NORMLEXPUB:12100::NO::P12100\_INSTRUMENT\_ID:312305

<sup>&</sup>lt;sup>2</sup> Ratification of the Labour Statistics Convention, 1985 (No. 160) of the ILO. Retrieved from: <u>http://www.pmo.gov.il/Secretary/GovDecisions/2009/Pages des1105.aspx</u>

- 3. Differences relating to the data cleaning process (checks and editing): Designing new computerized systems; addition of checks for demographic variables versus Population Register data; addition of logical checks to test for correspondence of reports at different stages of interviewing; use of an automatic coding system for data on industry and occupation, etc.
- 4. **Differences relating to the system of calculating weighting coefficients:** Changes in the weighting method; changes in calculating population estimates in order to calculate the weighting coefficient; changes in the weighting cells, etc.
- 5. **Differences relating to changes in the definition of labour force characteristics:** Transition to measuring the characteristics of the total labour force instead of the civilian labour force; addition of persons serving in the military (compulsory military service or permanent army) to the labour force as full-time employed persons.
- 6. **Differences related to seasonal adjustment and trend calculation:** Transition to seasonal adjustment of monthly series; use of monthly data from the quarterly survey, etc.

As can be seen, there are many differences which make it difficult to compare the findings from the two surveys. Nevertheless, there are several factors that explain the gaps between the series:

- 1. **The transition from the civilian labour force to the total labour force** (i.e., including persons serving in the military), in order to make better comparisons with the data published in other countries. In order to avoid publishing data on the size of the military, transparency is somewhat compromised with regard to the size of the sub-populations and data relating to industries.
- 2. In the monthly survey, the population was updated according to the results of the latest Population Census, so that the size and characteristics of the population are different in the two surveys. For example, examination of the civilian labour force data in the two surveys reveals an increase in the number of employed persons as well as in the number of persons who sought work, although the increase in the number of work seekers was greater.
- 3. The monthly survey includes more localities on the periphery than the quarterly survey. This may have caused a difference between the two surveys in the findings due to different employment and unemployment rates.
- 4. The ratio of those who responded by phone to those who responded in face-to-face interviews changed between the two surveys. The difference between responses obtained in the telephone survey and the responses obtained in face-to-face interviews might influence the results of the survey. People tend to respond differently in face-to-face interviews than they do in telephone surveys, which allow for a certain degree of anonymity.

There are other possible explanations regarding the causes of the differences in the results of the two surveys, but they are not as plausible. In the analyses of survey data, an attempt will be made to conduct a better analysis of these causes, and to quantify the extent of the differences more precisely, not only at the beginning stage but also over time.

Notwithstanding the above, the trend of employment and unemployment is the same in both surveys, and the main difference is in the base point (i.e., absolute numbers or levels derived in terms of percentages), which are used to calculate the trend. Therefore, the findings obtained to date enable us to assume that the difference in the surveys lies in the base point and not in changes over time.

# Differences in Measurement of Labour Force Characteristics in Other Countries versus Israel

Measurement of labour force characteristics is conducted throughout the world according to the recommendations of the International Labour Organization (ILO), including OECD countries (there is no separate method of measurement in OECD countries).

In the ILO, there are two methods of measuring labour force characteristics: one is measurement of the civilian labour force, and the other is measurement of the total labour force (including those serving in the military – compulsory service or permanent army). In Israel, from the beginning of the survey in the 1950s and 1960s until the end of 2011, it was decided to measure the civilian labour force.

Examination of the databases of the ILO shows that in Australia, there was a similar process of transition from a quarterly survey to a monthly survey in 1977-1978. The quarterly survey was conducted simultaneously with the monthly survey for one month. The results revealed that the unemployment rate in the last quarter of 1977 was 5.5%, and the unemployment rate in February 1978 was 7.5%.

## Chaining Coefficients between Quarterly and Monthly Labour Force Survey Data

With the transition to a monthly Labour Force Survey, there was a "break" in the data series due to changes in the methodology of the survey and in the definitions of labour force characteristics.

By conducting two parallel surveys in the 4<sup>th</sup> quarter of 2011, it was possible to calculate chaining coefficients for comparison of the data from the monthly survey with the data obtained in the past from the quarterly survey. Table 4/b below displays the chaining coefficients for quarterly series, which appear in the Labour Force Surveys Quarterly (only on the CBS website). To obtain an estimate adjusted to the definitions of the monthly survey, the corresponding estimate that was obtained in the 4th quarter (in the quarterly survey format) should be multiplied by the corresponding chaining coefficient, as in Table 4/b.

The percentage of change between the estimate obtained in January 2012 (based on the monthly Labour Force Survey) and the adjusted estimate of the 4th quarter of 2011 (obtained after multiplying by the chaining coefficient) is calculated as the difference between the two, divided by the 4th quarter estimate (after multiplying by the chaining coefficient).

For example:

The estimate of the number of participants in the civilian labour force in the 4th quarter of 2011 amounted to 3,216.2 thousand. To obtain an estimate of the participants in the labour force in the 4th quarter of 2011 that corresponds to the definitions of the monthly survey, this number should be multiplied by the chaining coefficient that corresponds to this estimate in Table 4/b (1.091). The result is 3,508.8 thousand.

In January 2012, the number of participants in the labour force was 3,523.4 thousand.

The following is the percentage of change between the quarterly estimate, adjusted to the estimate obtained in January by means of the chaining coefficient:

 $\frac{3,523.4 - 3,508.8}{3,508.8} \quad * \ 100 = 0.42\%$ 

Thus, in January 2012 there was an increase of 0.4% in the labour force, compared with the 4th quarter of 2011 (an increase of approximately 15,000 persons).

It should be noted that chaining coefficients can be used in seasonally adjusted data series and in trend data. To calculate relative indices based on chained data, it is necessary to first calculate the chained data in each of the series (for which the ratios are being measured). These data are then used to calculate the relative index. For example, to calculate the chained percentage of unemployed persons, it is necessary to calculate chained data for the series of participants in the labour force (using the chaining coefficients of the series) as well as for the series of unemployed persons (using the chaining coefficients of the series), and only then to calculate the percentage of unemployed persons out of the labour force using the chained data.

		and Name of Series	
Part	Table	Name of series	Chaining coefficient
1	1	In labour force (total)	1.091
1	1	Not in labour force (total)	0.874
1	1	Employed persons (total)	1.075
1	1	Unemployed persons (total)	1.377
1	2	In labour force (males)	1.101
1	2	Not in labour force (males)	0.833
1	2	Employed persons (males)	1.082
1	2	Unemployed persons (males)	1.439
1	3	In labour force (females)	1.081
1	3	Not in labour force (females)	0.906
1	3	Employed persons (females)	1.067
1	3	Unemployed persons (females)	1.315
1	4	Worked full-time in the determinant week (total)	1.046
1	4	Worked part-time in the determinant week (total)	1.111
1	4	Temporarily absent from work (total)	1.189
1	5	Worked full-time in the determinant week (males)	1.046
1	5	Worked part-time in the determinant week (males)	1.170
1	5	Temporarily absent from work (males)	1.229
1	6	Worked full-time in the determinant week (females)	1.045
1	6	Worked part-time in the determinant week (females)	1.075
1	6	Temporarily absent from work (females)	1.162
1	7	Jews, in labour force (total)	1.069
1	7	Jews, employed persons (total)	1.060
1	7	Jews, unemployed persons (total)	1.222
1	8	Jews, worked full-time (total)	1.067
1	8	Jews, worked part-time (total)	1.040
1	8	Jews, temporarily absent from work (total)	1.094
1	9	Persons aged 15–17, in labour force (total)	1.499
1	9	Persons aged 18–24, in labour force (total)	1.676
	9	Persons aged 25–34, in labour force (total)	1.056
	9	Persons aged 35–44, in labour force (total)	1.018
1	9	Persons aged 45–54, in labour force (total)	0.990
1	9	Persons aged 55–59, in labour force (total)	1.004
1	9	Persons aged 60–64, in labour force (total)	1.011
	9	Persons aged 65–69, in labour force (total)	1.077
	9	Persons aged 70+, in labour force (total)	1.146
	9	Jews aged 15–17, in labour force (total)	1.553
	9	Jews aged 18–24, in labour force (total)	1.765
1	9	Jews aged 25–34, in labour force (total)	1.048
1	9	Jews aged 35–44, in labour force (total)	1.013
1	9	Jews aged 45–54, in labour force (total)	1.002
1	9	Jews aged 55–59, in labour force (total)	0.988
1	9	Jews aged 60–64, in labour force (total)	1.030
1	9	Jews aged 65–69, in labour force (total)	1.056
1	9	Jews aged 70+, in labour force (total)	1.160

## Table 4/b.- Chaining Coefficients for Quarterly Series, by Part Number, Table Number and Name of Series

Part	Table	Name of series	Chaining coefficient
1	10	Persons aged 15–17, in labour force (males)	1.594
1		Persons aged 18–24, in labour force (males)	1.866
1		Persons aged 25–34, in labour force (males)	1.063
1		Persons aged 35–44, in labour force (males)	1.021
1	10	•	1.007
1	10	Persons aged 55–59, in labour force (males)	0.976
1	10	Persons aged 60–64, in labour force (males)	0.973
1	10	Persons aged 65–69, in labour force (males)	1.066
1	10	Persons aged 70+, in labour force (males)	1.144
1	10	Persons aged 15–17, in labour force (females)	1.406
1	10	Persons aged 18–24, in labour force (females)	1.512
1	10	Persons aged 25–34, in labour force (females)	1.049
1	10	Persons aged 35–44, in labour force (females)	1.014
1	10	Persons aged 45–54, in labour force (females)	0.976
1	10	Persons aged 55–59, in labour force (females)	1.026
1	10	Persons aged 60–64, in labour force (females)	1.071
1	10	Persons aged 65–69, in labour force (females)	1.079
1	10	Persons aged 70+, in labour force (females)	1.150
1	11	Jerusalem District – in labour force (total)	1.112
1	11	Jerusalem District – employed persons (total)	1.093
1	11	Jerusalem District – unemployed persons (total)	1.429
1	11	Jerusalem District – not in labour force (total)	0.921
1	12	Northern District – in labour force (total)	1.174
1	12	Northern District – employed persons (total)	1.128
1	12	Northern District – unemployed persons (total)	1.824
1	12	Northern District – not in labour force (total)	0.873
1	13	Haifa District – in labour force (total)	1.034
<u>1</u> 1	13 13	Haifa District – employed persons (total)	<u> </u>
1	13	Haifa District – unemployed persons (total) Haifa District – not in labour force (total)	0.900
1	13	Central District – in labour force (total)	1.078
1	14	Central District – employed persons (total)	1.086
1	14	Central District – unemployed persons (total)	0.947
1		Central District – not in labour force (total)	0.843
1	15	Tel Aviv District – in labour force (total)	1.069
1	15	Tel Aviv District – employed persons (total)	1.056
1	15	Tel Aviv District – unemployed persons (total)	1.340
1	15	Tel Aviv District – not in labour force (total)	0.874
1	16	Southern District – in labour force (total)	1.095
1	16	Southern District – employed persons (total)	1.073
1	16	Southern District – unemployed persons (total)	1.441
1	16	Southern District – not in labour force (total)	0.870
1	17	Young persons aged 15–17, in labour force (total)	1.497
1	17	Young persons aged 15–17, not in labour force (total)	0.969
1	17	Young persons aged 15–17, employed persons (total)	1.435
1	17	Young persons aged 15–17, unemployed persons (total)	1.733
1	18	Young persons aged 15–17, in labour force (males)	1.593
1	18	Young persons aged 15–17, not in labour force (males)	0.966
1	18	Young persons aged 15–17, employed persons (males)	1.560
1	18	Young persons aged 15–17, unemployed persons (males)	1.740
1	19	Young persons aged 15–17, in labour force (females)	1.401
1	19	Young persons aged 15–17, not in labour force (females)	0.972
1	19	Young persons aged 15–17, employed persons (females)	1.310
1	19	Young persons aged 15–17, unemployed persons (females)	1.740

	T	Name of series	Chaining coefficient
1	20	Persons aged 25–64, in labour force (total)	1.021
1	20	Persons aged 25–64, not in labour force (total)	0.931
1	20	Persons aged 25–64, employed persons (total)	1.009

		01	02	03	04	05	06

- **2.000** Mark the person number of the individual who provides the information (*if that person is not a member of the household, mark "98", and indicate that person's name and relationship to the people who live in the dwelling \_\_\_\_\_)*
- **2.130** (*If age 24 or less and Single*) **Interviewer: Fill in the person number of the individual's mother** (*if the mother does not appear in the table mark "98"*)

98 - continue to 2.131; other - go to 2.150

- 2.131 Mark the reason that the mother does not appear in the table:
  - 1. Stays abroad
  - 2. Lives at another dwelling in Israel
  - 3. Stays at an institution (e. g., nursing home)
  - 4. Deceased
  - 5. Other, specify: \_\_\_\_\_
- **2.140** (*If number of mother 98 or unknown*) **Interviewer: Fill in the person number of the individual's father** (*if the father does not appear in the table mark "98"*)

98 - continue to 2.141, other - go to 2.150

- 2.141 Mark the reason that the father does not appear in the table:
  - 1. Stays abroad
  - 2. Lives at another dwelling in Israel
  - 3. Stays at an institution (e. g., nursing home)
  - 4. Deceased
  - 5. Other, specify: \_\_\_\_\_
- **2.150** (*If Married*) **Interviewer: Fill in the person number of the individual's partner** (*if the partner does not appear in the table mark "98"*)

98 - continue to 2.160, other - go to 2.120.1

#### 2.160 Mark the reason that the partner does not appear in the table:

- 1. Stays abroad
- 2. Lives at another dwelling in Israel
- 3. Stays at an institution (e. g., nursing home)
- 4. Deceased
- 5. Other, specify: \_\_\_\_\_

<u>Note:</u> If there is more than one household in the dwelling, the following information is obtained for each one and recorded in the appendix for additional households in the dwelling: familial relationships within the household; in how many rooms does the household live (2.180.1); do they employ domestic help or a caregiver for pay; did the domestic help or caregiver work during the last week, and if so, for how many hours (2.210–2.190).

## 2.120.1 What is the main lifestyle in terms of religion of those who live in the dwelling?

- 1. Non-religious, secular
- 2. Traditional
- 3. Religious
- 4. Very religious
- 5. Ultra-religious ("Haredi")
- 6. Mixed lifestyle
- 7. Other \_\_\_\_\_

## 2.180.1 How many rooms does the family (household) occupy (including half-rooms and salon)?

## **Ownership of a Dwelling**

- **2.181 Do you own the dwelling in which you live, or is it rented?** ["Owned": by at least one of the persons living in the dwelling]
  - 1. You own it Go to 2.190
  - 2. You rent it Continue to question 2.183
  - 3. Assisted living Go to 2.190
  - 4. Living rent-free in dwelling owned by someone else (including kibbutz) Go to 2.190
  - 5. Key money apartment Go to 2.190
  - 6. Other, specify \_\_\_\_\_ Go to 2.190

#### 2.183 From whom did you rent the dwelling?

- 1. A private individual
- 2. A public housing company: 'Amidar', 'Prazot', 'Halamish', 'Shikmona', etc.
- 3. Educational institution, such as dormitory or yeshiva
- 4. Government, local authority, kibbutz, moshav, etc.
- 5. Other, specify \_\_\_\_\_

## **Employment of Domestic Help or Caregiver**

- 2.190 In your home, do you employ domestic help or a caregiver for pay?
  - 1. Yes Continue to question 2.200
  - 2. No Go to the questionnaire, Item No. 1
- 2.200 Did the domestic help or caregiver work last week?

**1. Yes** – *Continue to question 2.210* 

2. No - Go to the questionnaire, Item No. 1

2.210 How many hours did he or she work last week? \_\_\_\_\_

#### Section 3 – Disabilities

# 2.250 Does anyone living in the dwelling have any health problem, of physical or mental nature, that <u>interferes with his or her day-to-day functioning</u> and has lasted for six months or more (not including learning disability)?

**1. Yes** – *Continue to question 2.260* **2. No** - *Go to 3.20* 

## 2.260 Among the people living in the dwelling, who has a health problem?

More than one answer is possible Questions 2.261-2.267 are asked about each individual selected in 2.260

#### 2.261 Do you have difficulty seeing, even if wearing glasses or contact lenses?

- 1. No, no difficulty
- 2. Yes, some difficulty
- 3. Yes, a lot of difficulty
- 4. Do not see at all

#### 2.262 Do you have difficulty hearing, even if using hearing aid?

- 1. No, no difficulty
- 2. Yes, some difficulty
- 3. Yes, a lot of difficulty
- 4. Do not hear at all

#### 2.263 Do you have difficulty walking or climbing stairs?

- 1. No, no difficulty
- 2. Yes, some difficulty
- 3. Yes, a lot of difficulty
- 4. Cannot do at all

#### 2.264 Do you have difficulty in getting dressed or washing up?

- 1. No, no difficulty
- 2. Yes, some difficulty
- 3. Yes, a lot of difficulty
- 4. Cannot do at all

#### 2.265 Do you have difficulty remembering or concentrating?

- 1. No, no difficulty
- 2. Yes, some difficulty
- 3. Yes, a lot of difficulty
- 4. Cannot do at all

## 2.266 Apart from those that have been mentioned above, do you have another problem that interferes with your day-to-day functioning?

- 1. Yes
- 2. No

# **2.267** Is the disability recognized by the National Insurance Institute of Israel ("Bituach Leumi"), the Ministry of Defense, or any other government body? (Interviewer: If not all the disabilities are recognized but at least one is, mark "yes")

1. Yes

- 1. res 2. No
- 3. Recognition in process

	Education
	Did you attend or do you attend school (including studies at university, yeshiva, in a course lasting st one year, etc.)?
	Attended only in the past
	Attends at present Continue to
-	(including on vacation) Question 3.30
3	B Did not attend school at all
	- Skip to Question 4.00

- 1 Yes
- 2 No

If in Question 4.40 " weeks absent" less than 5, skip to Question 4.100

If in Question 4.40 " weeks absent" equal to or more than 5, skip to Question 4.60

#### 4.53 What type of accident were you involved in?

- 1 A work-related accident, including a road accident on the way to or from work
- 2 Another road accident
- 3 Another type of accident
- If in Question 4.40 " weeks absent" less than 5, skip to Question 4.100

If in Question 4.40 " weeks absent" equal to or more than 5, continue to Question 4.60

### 4.60 Were you absent with pay? Includes partial pay, payment from National Insurance or other insurance fund, and maternity leave up to 26 weeks

- 1 Yes Skip to Question 4.100
- 2 No Continue to Question **4.70**
- 3 Other, self-employed, freelancer, unpaid family member skip to Question 4.100

## 4.70 At the end of the period of absence, is your return to the same workplace guaranteed?

1 Yes – Skip to Question 4.100

2 No - Continue to Question 4.80

4.80 Did you actively seek work in the last four weeks (including an effort to establish a business)?

1 Yes - Skip to Question 4.400

- 2 No Skip to Question 4.600
- 3 No, because I have been promised work that will start within 30 days Skip to Question 4.470

4.100 How many workplaces do you work in? \_

Details on Main Work
4.101 Now I will ask for some details regarding your main place of work.
4.110 Do you still work in the same locality where you worked at the time of the
previous surveys? (for repeat surveys) 1 Yes - Skip to Question <b>4.120</b>
2 No - Continue to Question <b>4.111</b>
4.111 In what locality do you work?
1 Works in locality of residence
2 Works in locality of residence - state name of locality:
3 Works in various localities – state the region:
4 Works abroad (as a representative of an institution or company operating in Israel)
4.120 Do you still work in the same workplace as at the time of the previous surveys?
(for repeat surveys)
1 Yes - Continue to Question <b>4.160</b>
2 No - Continue to Question <b>4.121</b>
4.121 What is the name of your place of work?
4.122 What is the main activity at your place of work?
For example: production, repair, distribution
4.123 In which department or division do you work?
4.124 What is the main activity of this department or division?
4.130 In which economic sector do you work?
1 Private sector, for example, a business
2 Public sector, for example, local government or state school
3 Non-profit institution, for example, a charity, professional, or religious organization
4.140 How long, in minutes, does it typically take you to travel to your main workplace?
4.150 In what year did you start working at this workplace?
If began working more than two years ago, skip to Question <b>4.160</b>
4.151 In what month did you start to work?
4.152 How did you find your job?
<ol> <li>Uploaded or updated c.v. documents on the Internet</li> </ol>
2 Contacted the employer
3 Attempt to start a business
4 Through friends, relatives, or others
5 Through an employment and/or a placement agency
6 Through signing up at the Employment Bureau
7 By answering a want ad in the newspaper or on the Internet
8 Another method
4.153 For how many weeks did you seek work?
4.160 In your current workplace, do you perform the same tasks as in the previous survey (for
repeat surveys) 1 Yes - Skip to Question <b>4.164</b>
,
2 No - Continue to Question 4.161
4.161 What is the main type of work that you do at this workplace?         4.162 Describe your main task at this workplace.
For example, handling import licences, repairing telephones
4.163 What is your job title at this workplace (if any)?
4.164 Do you manage or supervise other workers? 1 Yes - Continue to Question 4.165

#### **Explanation of Seasonal Adjustment**

As of 2012, the monthly series of the Labour Force Survey has been seasonally adjusted. In general, a procedure of seasonal adjustment can be performed on a series with original data of at least five years. Since the data of the monthly series, based on the new survey, began in January 2012, a special procedure of seasonal adjustment and trend estimation was performed, based on monthly original data. These data were computed from the data of the quarterly Labour Force Survey for the period beginning in January 2003 until September 2011, with the addition of original data from the monthly Labour Force Survey, from October 2011. In order to perform the procedure of seasonal adjustment and trend estimations, the aforementioned data series was made to correlate with the characteristics of the entire labour force, in accordance with the definitions of the monthly Labour Force Survey.

Note that seasonally adjusted data are calculated by adjusting the original data for the influence of seasonality and festival and trading day effects. Trend data are estimated by removing the irregular influences (noise) from the seasonally adjusted data. The seasonally adjusted data and the trend are subject to revisions as they are calculated anew each month on the basis of additional original data (concurrent seasonal adjustment).

A detailed and updated explanation on the seasonal adjustment procedure and trend estimation is given in the publication "<u>Seasonal and prior adjustment factors for 2017, trends for 2013-2017</u>" (internet only, at the C.B.S.: "Classification and methods, statistical methods, time series").

## **EXPLANATORY NOTES**

### Area Covered by the Statistical Data

The statistical data relate to the economic territory of the State of Israel, unless otherwise stated.

A. The economic territory of a country (according to the definition of the OECD-SNA. For a detailed definition, see: OECD, Glossary of Statistical Terms): The economic territory of a country consists of the geographic territory administered by a government within which persons, goods and capital circulate freely.

**The economic territory of the State of Israel**: According to this definition, the economic territory of the State of Israel is as indicated in paragraph B below.

### B. District and Sub-District:

The districts and sub-districts are defined according to the official administrative division of the State of Israel, which includes 6 districts and 15 sub-districts. Including Israeli localities in the Judea and Samaria Area.

### Special Symbols in the Tables

Blank space = Irrelevant due to the table's structure

- = No cases
- .. = Unknown or not for publication
- () = Data based on estimates, or data based on a small number of cases, or data with a relative sampling error which is high

	des of em	ployed and ur	nemployed n	ersons						מועסקים	עסקים והבלתי	(1) אחוזי המו

(1) Percentages of employed and unemployed persons are calculated of males aged 18-24 in labour force. (1) אחוזי המועסקים והבלתי מועסקים
 מחושבים מתוך הגברים בני ה-24-18 שבכוח העבודה.

, עד שנת 2017: העובדים פחות מ-35 שעות בשבוע בדרך כלל (1) משום שחיפשו עבודה במשרה מלאה או נוספת אך לא מצאו. משנת 2018: העובדים פחות מ-35 שעות בשבוע בדרך כלל, שמעוניינים לעבוד יותר מ-35 שעות וחיפשו באופן פעיל בארבעת השבועות האחרונים לעבוד מספר שעות רב יותר.

(2) החל משנת 2018 הנתונים מתבססים על שאלון חדש ומורחב. ראו מבוא.

(3) אחוזים מתוך כלל המועסקים.

(2) As of 2018, the data are based on a new and extended questiannaire. See Introduction.

because they sought but did not find full-time or additional work.

As of 2018: those usually working less than 35 hours per week,

who are interested in working more than 35 hours and actively

sought to work more hours in the last four weeks.

(3) Percentages of all employed persons.
